Member of Association of Indian Universities & Approved by UGC (Govt. of India) under 2(f) & 12(B)

VISION

To create knowledge based society with scientific temper, team spirit and dignity of labor to face global competitive challenges.

Mission

To evolve and develop skill based systems for effective delivery of knowledge so as to equip young professionals with dedication and commitment to excellence in all spheres of life.

Quality Policy

To provide Quality Education through Faculty development, updating of facilities and continual improvement meeting University norms and keeping stake holders satisfied.

Knowledge Wheel

At Poornima, the academic atmosphere is a rare blend of modern technical as well as soft skills and traditional systems of learning processes.

Title of the Programme: Masters of Computer Applications (MCA)

Nature of the Programme: MCA is a two year full-time programme.

Program Outcomes (PO) :

Post Graduateswill beableto:

PO1: ComputationalKnowledge: Apply knowledge of computing fundamentals, computing specialisation, mathematics, and domain knowledge appropriate for the computing specialisation to the abstraction and conceptualisation of computing models from defined problems and requirements.

PO 2: Problem Analysis: Identify, formulate, research literature, and solve complex computingproblemsreachingsubstantiatedconclusionsusingfundamentalprinciplesofmathematics, computingscien ces, and relevant domain disciplines.

PO 3: Design /Development of Solutions: Design and evaluate solutions for complex computingproblems, and design and evaluate systems, components, or processes that meets pecified needs with appropriate consideration for public health and safety, cultural, societal, and environmental considerations.

PO 4: Conduct investigations of complex Computing problems: Use research-based knowledgeand research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.

PO 5: Modern Tool Usage: Create, select, adapt and apply appropriate techniques, resources, andmoderncomputingtoolstocomplexcomputingactivities, with an understanding of the limitations.

PO 6: Professional Ethics: Understand and commit to professional ethics and cyber regulations, responsibilities, and norms of professional computing practices.

PO 7: Life-long Learning: Recognise the need, and have the ability, to engage in independentlearningfor continual development as acomputing professional.

PO8:Projectmanagementandfinance:Demonstrateknowledgeandunderstandingofthecomputing and management principles and apply these to one's own work, as a member and leaderina team, to manageprojects and in multidisciplinary environments.

PO 9: Communication Efficacy: Communicate effectively with the computing community, andwith society at large, about complex computing activities by being able to comprehend and writeeffectivereports, design documentation, make effective presentations, and give and understand clear instructions.

PO 10: Societal and Environmental Concern: Understand and assess societal, environmental, health, safety, legal, and cultural issues within local and global contexts, and the consequential responsibilities relevant to professional computing practices.

PO11:IndividualandTeamWork:Functioneffectivelyasanindividualandasamemberorleaderindiverseteams and inmultidisciplinaryenvironments.

PO 12: Innovation and Entrepreneurship: Identify a timely opportunity and using innovation topursue that opportunity to create value and wealth for the betterment of the individual and society atlarge.

Examination System :

A. Marks Distribution of Theory Course:

B. Marks Distribution of Practical Course :

PU/Batch 2023-25/FCE/Syllabus/MCA AI &DS

Th.: Theory, Pr.: Practical, ESE: End Semester Examination, MSE: Mid Semester Examination, CIE: Continuous Internal Evaluation.

<u>CO Wise Marks Distribution:</u>

Exom Entity	Theory	Subject	Practical/ Studio Subject			
Exam Entity	Maximum Marks	CO to be Covered	CO to be Covered	Maximum Marks		
CIE-I	16 (8 + 8)	1 & 2	1 & 2	24 (12 + 12)		
MSE	16(8+8)	3 & 4	3 & 4	24 (12 + 12)		
CIE-II (Activity/ Assignment)	8 (8)	5	5	12 (12)		
ESE	60	-	-	40		
TOTAL	100	-	-	100		

Minimum Passing Percentage in All Exams:

		Minimum Passing Percentage in					
S No.	Program Name	IE	ESE	Total			
		Component	Component	Component			
1	Course Work for PhD Registration	-	-	50%			
2	B. Arch.	-	45%	50%			
2	MBA, MCA, M.Des., M.Tech., M.Plan,		400/	400/			
3	MHA, MPH	-	40%	40%			
4	MBA, MCA, M.Des., M.Tech., M.Plan,		250/	250/			
4	MHA, MPH	-	35%	35%			

SGPA Calculation

SGPA =
$$\frac{C_1G_1 + C_2G_2 + \dots + C_nG_n}{C_1 + C_2 + \dots + C_n}$$

$$SGPA = \frac{\sum_{i} C_{i} \times G_{i}}{\sum_{i} C_{i}}$$

where (as per teaching scheme & syllabus):

- C_i is the number of credits of subject i,
- G_i is the Grade Point for the subject I and i = 1 to n,
- n = number of subjects in a course in the semester

CGPA Calculation

$$CGPA = \frac{C_1G_1 + C_2G_2 + \dots + C_nG_n}{C_1 + C_2 + \dots + C_n}$$
where (as per teaching scheme & syllabus):
$$CGPA = \frac{\sum_{i} C_i \times G_i}{\sum C_i}$$

$$G_i \text{ is the number of credits of subject i,}$$

$$G_i \text{ is the Grade Point for the subject I and i = 1 to reduce the subject I and i = 1$$

$$G_i$$
 is the Grade Point for the subject I and $i = 1$ to n,

n = number of subjects in a course of all the semesters up to which CGPA is computed

Grading Table:

Applicable for B.Arch. & Ph.D. Courses			Applicable for All Courses except B.Arch. & Ph.D.				
Academic	Grade	Grade	Marks Range	Academic	Grade	Grade	Marks Range
Performance		Point	(in %)	Performance		Point	(in %)
Outstanding	0	10	$90 \le x \le 100$	Outstanding	0	10	$90 \le x \le 100$
Excellent	A+	9	80≤ x <90	Excellent	A+	9	80≤ x <90
Very Good	А	8	70≤ x <80	Very Good	А	8	70≤ x <80
Good	B+	7	60≤ x <70	Good	B+	7	60≤ x <70
Above Average	В	6	50≤ x <60	Above Average	В	6	50≤ x <60
Fail	F	0	x <50	Average	С	5	40≤ x <50
Absent	Ab	0	Absent	Pass	Р	4	35≤ x <40
	1	1	J	Fail	F	0	x <35
				Absent	Ab	0	Absent

CGPA to percentage conversion rule:

Equivalent%ofMarksintheProgram=CGPA*10

Award of Class

CGPA	Percentage	Equivalent Division
$7.50 \le CGPA$	75% or more	First Division with Distinction
$6.00 \le \text{CGPA} < 7.50$	$60\% \le x < 75\%$	First Division
$5.00 \le \text{CGPA} < 6.00$	$50\% \le x < 60\%$	Second Division
$4.00 \le \text{CGPA} < 5.00$	$40\% \le x < 50\%$	Pass Class

Guidelines for Massive Open Online Courses (MOOCs)

(Session 2023-24)

Poornima University, in its never ending endeavor to equip students with best-of-class learning and knowledge, has undertaken to include MOOC courses as part of its credit scheme from session 2023-24 onwards. The objective behind this is to enable students to study courses designed by the best teachers in the country and to scale their knowledge base with the rest of learners from the nation. The MOOCs which are included under this scheme is can be chosen from SWAYAM and NPTEL.

1. Introduction of MOOCs: SWAYAM and NPTEL

About SWAYAM:

SWAYAM is a programme initiated by Government of India and designed to achieve the three cardinal principles of Education Policy viz., access, equity and quality. The objective of this effort is to take the best teaching learning resources to all, including the most disadvantaged. SWAYAM seeks to bridge the digital divide for students who have hitherto remained untouched by the digital revolution and have not been able to join the mainstream of the knowledge economy.

This is done through a platform that facilitates hosting of all the courses, taught in classrooms to be accessed by anyone, anywhere at any time. All the courses are interactive, prepared by the best teachers in the country and are available, free of cost to any learner. However learners wanting a SWAYAM certificate should register for the final proctored exams that come at a fee and attend in-person at designated centers on specified dates. Eligibility for the certificate will be announced on the course page and learners will get certificates only if this criteria is matched.

The courses hosted on SWAYAM are in 4 quadrants - (1) video lecture, (2) specially prepared reading material that can be downloaded/printed (3) self-assessment tests through tests and quizzes and (4) an online discussion forum for clearing the doubts. Steps have been taken to enrich the learning experience by using audio-video and multi-media and state of the art pedagogy / technology.

In order to ensure that best quality content is produced and delivered, nine National Coordinators have been appointed. They are:

- 1. AICTE (All India Council for Technical Education) for self-paced and international courses
- 2. NPTEL (National Programme on Technology Enhanced Learning) for Engineering
- 3. UGC (University Grants Commission) for non-technical post-graduation education
- 4. CEC (Consortium for Educational Communication) for under-graduate education
- 5. NCERT (National Council of Educational Research and Training) for school education
- 6. NIOS (National Institute of Open Schooling) for school education
- 7. IGNOU (Indira Gandhi National Open University) for out-of-school students
- 8. IIMB (Indian Institute of Management, Bangalore) for management studies
- 9. NITTTR (National Institute of Technical Teachers Training and Research) for Teacher Training programme

Two types of courses are offered on SWAYAM platform: Credit Courses and Non- Credit Courses. Credit courses are offered for each semester in January and July every year. The list is available on SWAYAM official website: https://onlinecourses.swayam2.ac.in/

About NPTEL:

NPTEL (National Programme on Technology Enhanced Learning), is a joint venture of the IITs and IISc, funded by the Ministry of Education (MoE) Government of India, and was launched in 2003. Initially started as a project to take quality education to all corners of the country, NPTEL now offers close to 600+ courses for certification every semester in about 22 disciplines.

Some highlights:

• Largest online repository in the world of courses in engineering, basic sciences and selected humanities and management

subjects

- YouTube channel for NPTEL most subscribed educational channel, 1.3 billion views and 40+ lakhs subscribers
- More than 56000 hours of video content, transcribed and subtitled
- Most accessed library of peer-reviewed educational content in the world
- Translation of more than 12000 hrs of English transcripts in regional Indian languages

NPTEL Online Certification:

The objective of enabling students obtain certificates for courses is to make students employable in the industry or pursue a suitable higher education programme. Through an online portal, 4, 8, or 12-week online courses, typically on topics relevant to students in all years of higher education along with basic core courses in sciences and humanities with exposure to relevant tools and technologies, are being offered. Enrolment to and learning from these courses is free. Following these online courses, an in-person, proctored certification exam is conducted and a certificate is provided through the participating institutions and industry, as applicable. Some statistics regarding the open online courses since March 2014 till Dec 2021

Completed courses: 3496;

Enrollments across courses: 1.58 CRORE +

Number of exam registrations: 15.1 LAKH +

All the statistics pertaining to completed courses are available at https://beta.nptel.ac.in/courses. All courses are completely free to enroll and learn from. The certification exam is optional and comes at a fee of Rs 1000/course exam.

2. MOOCs at Poornima University:

MOOCs envelops best in class teaching - learning processes along with meeting the requirements of various courses in terms of quality of teaching and evaluation system. To promote the MOOCs among students of Poornima University, it is decided to consider the credits earned through MOOCs.

(a) Options for MOOCs at Poornima University

(For this document, only those MOOCs will be considered which are available on SWAYAM & NPTEL platforms)

- Credit and Non-credit SWAYAM MOOCs can be opted by anyone, anytime, anywhere and in any language. However, prior-permission of the University Authorities is mandatory if the credits are to be transferred to regular degree.
- In case of credit courses, there are two ways to opt these courses for the purpose of credit transfer to PU system as given below:

OPTION–I: As Open Elective (for batches entered till 2022) / Multidisciplinary Courses (for batches admitted from 2023-24 onwards):

Open Elective (for batches entered till 2022) / Multidisciplinary Courses (for batches admitted from 2023-24 onwards) are available at University level in offline mode for which relevant booklets are already published. **These courses carries 02 credits.**These category/type of courses (similar/different) are also available as MOOC courses. The respective Deans / HODs shall provide both the options to all the students to either select offline courses or MOOCs as per details given below:

- Deans / HODs shall prepare a list of upto 05 appropriate MOOC courses of 02/03 credits each, well in advance (at-least 15 days prior to commencement of semester) and take approval from the Office of Dean, Academics / Pro-President, PU.
- After approval, the respective Deans / HODs shall circulate a notice to all their respective students so that they can select any one course from the list, the credits (**only 02**) of which will be counted against Open Elective/ Multidisciplinary courses pertaining to that particular semester.
- If the students are not willing to opt for MOOC Open Elective/ Multidisciplinary course, they can proceed with the current offline practice of opting for Multidisciplinary courses.

• The tutor of the class shall monitor the progress (assignments, feedback, any problem etc.) on weekly basis and report to Head/Dean.

OR

OPTION–II: As Major / Minor Courses:

- Deans / HODs shall identify a course of **03 credits** for each semester, well in advance (at-least 15 days prior to commencement of semester) and take approval from the Office of Dean, Academics / Pro-President, PU.
- After approval, the respective Deans / HODs shall circulate a notice to all their respective students citing that the particular course will be conducted through MOOCs only and is compulsory for all respective students. The credits of this course will be counted against Major/Minor courses pertaining to that particular semester.
- The tutor of the class shall monitor the progress (assignments, feedback, any problem etc.) on weekly basis and report to Head/Dean.
- This is to be noted that if Deans / HODs decide to conduct any major/minor course in any semester through MOOCs, no offline course will be conducted against that.

(b) Important points related to MOOCs at Poornima University

- Only one MOOC shall be allowed in a particular semester for the purpose of credit transfer in the beginning.
- No attendance will be taken for MOOC courses.
- Last period of T/T/S shall be taken for MOOC courses which shall be in self-study mode.
- The method of assessments of MOOC such as assignments and examination are completely associated with that particular MOOC and no exam will be conducted by the department as well as by the Examination Cell.
- The respective Dean / HOD must submit the detail of course i.e., code, name and credit of MOOC opted against that particular course in particular semester attached with highlighting in the related examination scheme of syllabus of that semester signed by BOS Convener / HoD and Dean of Faculty to the office of Pro-President before commencement of the classes.
- SWAYAM will award a certificate to all the students passing the examination along with the credit earned. The center of examination for SWAYAM MOOCs will be finalized by SWAYAM. All the responsibility related to registration for MOOCs, timely submission of assignments, examinations etc. will be borne by the students only.
- The list of registered students in MOOC along with name of course will be submitted to the Examination Cell by the Deans / HoDs before commencement of the classes.
- Any student who would not be able to register/present/clear/pass the MOOC in the stipulated time, it is the choice of the student that he or she may register in next semester (odd or even) with MOOC again or appear as a back exam candidate of the University as per PU norms.
- There will be no provision of re-evaluation of MOOC.
- The scorecard and related certificate of MOOC along with a consolidated list of students with marks of assignment and final exam will be submitted to the examination cell by the concerned Dean / HOD for further process. It is also recommended that alteration/changes/scaling in marks obtained by the students in any MOOC will not be considered.
- The exam registration fee of MOOC up to Max. INR 1000/- will be reimbursed to the student only after successful completion of the course in first attempt and submission of the fee receipt, score-card and certificate of the MOOC to the concerned department within stipulated time after declaration of the results.

NOTE: This is to be noted that the procedure for getting approval from BOS, Faculty Board, Academic Council and BoM is to be followed as per regular process. Attached Items:

Γ

Semester-I

Major (Core Courses)

Theory

Code: MCACSA1101

Foundation of Mathematics

3 Credits [LTP: 3-0-0]

COURSE OUTCOME:

The student would be able to:

- Describe the basic concept of matrices and their various properties
- Obtain the solution of Eigen value and Eigen vectors and inverse of matrix using Cayley Hamilton theorem.
- Obtain important features of vector, Del operator and its various forms in gradient, divergence and curl.
- Solve the order and degree of differential equations and their solutions
- Analyze of complex number and their properties

A. OUTLINE OF THE COURSE

Unit No.	Title of the unit	Time required for the Unit (Hours)
1.	Matrix Theory	08
2.	Eigen Values	07
3.	Vector calculus	08
4.	Differential Equation	08
5.	Complex Algebra	07

B.

DETAILED SYLLABUS

Unit	Unit Details	
1.	Matrix Theory	
	•	Introduction of Unit
	•	Introduction to the matrix theory
	•	Types of matrices,
	•	Inverse of matrices,
	•	Rank of matrices,
	•	Solving system of linear equations.
	•	Conclusion of Unit
2.	Eigen Values	
	•	Introduction of Unit
	•	Eigen values and Eigen vectors,
	•	Cayley-Hamilton Theorem (without proof) with application,
	•	Diagonalization of matrices.
	•	Conclusion of Unit
3.	Vector calculus	
	•	Introduction of Unit
	•	Scalar and Vector quantity
	•	Derivative of a vector function, Velocity and accelerations
	•	Basic concepts of vectors, gradient, divergence and curl of a vector.
	•	Conclusion of Unit
4.	Differential Equation	
	•	Introduction of Unit
	•	Basic idea of differential equations
	•	Degree and order of Differential equation
	•	Variable separation, Homogeneous,
	•	Linear equations and equations reducible to linear form
	•	Exact Differential equation

	•	Conclusion of Unit
5.	Complex Algebra	
	•	Introduction of Unit
	•	Introduction to the complex algebra, complex numbers,
	•	Geometrical representation of complex numbers,
	•	Argand diagram,
	•	De- Moirvre's theorem
	• Conclusion of Unit

Code: MCACCA1101

Programming in C

3 Credits [LTP: 3-0-0]

COURSE OUTCOME

Students will be able to:

- Illustrate the concept of data types, loops, functions, array, pointers, string, structures and files.
- Analyze the conditional and iterative statements to write C programs.
- Develop user defined functions to solve real life problems.
- Design C programs using pointers and to allocate memory using dynamic memory management functions.
- Apply programming concepts to compile and debug c programs to find solutions.

A. OUTLINE OF THE COURSE

Unit No.	Title of The Unit	Time required for the Unit (Hours)
1.	Introduction to CProgramming	7
2.	Decision Making & Looping	7
3.	Array, String and Functions	8
4.	Advance programminginC	8
5.	File handling & Additionalfeatures	8

B. DETAILED SYLLABUS

Unit	Unit Details	
1.	Introduction to CProgra	mming
	-	
	•	Introduction of Unit
	•	Introduction to computer-based problem solving. Program design and
	implementation issues-	Flowcharts & Algorithms. Top-down design & stepwise refinement
	•	Programming environment – Machine language, assembly language, high level
	languages, Assemblers	,Compilers, and Interpreters.
	•	Overview of C, Data Types, Constants & Variables, Literals, Operators &
	Expressions	
	•	Conclusion of Unit
2.	Decision Making & Loop	Ding
	•	Introduction of Unit
	•	
	•	Decision making in C- if statement, if-else statement, Nested if statement, if else
	if Ladder, Switch case	
	•	Loop control in C – for loop, while loop, do-while loop
	•	Control flow in C ₂ break continue and goto statement
		Control now in C- oreak, continue and goto statement.
	•	Conclusion of Unit
3.	Array, String and Funct	ions

	Introduction of Unit
	• Array- 1D array, 2D array and dynamic array
	• Scope rules- Local & global variables, scope rules of functions
	• Functions-parameter passing, call by value and call by reference, calling functions with arrays, command line argument, recursion- basic concepts.
	• String – String in build function
	• Conclusion of the Unit
4.	Advance programminginC
	Introduction of Unit
	• Pointers- pointer expression, assignments, arithmetic, comparison, arrays of pointers, pointers to pointers, initializing pointers, pointers to functions, function retuning pointers.
	• Structures- Basics, declaring, referencing structure elements, array of structures, passing structures to functions, structure pointers, arrays and structures within structures, typedef.
	• Unions – Declaration, uses
	• Enumerated data-types
	• Conclusion of the Unit
5.	File handling & Additionalfeatures
	Introduction of Unit
	• File Handling – The file pointer, file accessing functions-fopen, fclose, putc, getc, fprintf, reading and writing into a file
	• Advance features- storage classes and dynamic memory allocation
	• C Preprocessor- #define, #include, #undef, Conditional compilation directives.
	• C standard library and header files: Header files, string functions, mathematical functions, Date and Time functions.
	• Conclusion of the Unit

Data Structure and Algorithms

3 Credits [LTP: 3-0-0]

COURSE OUTCOME

The student would be able:

- State various types of data structures and their uses according complexity.
- Illustrate the concept of searching and sorting techniques and apply on data.
- Analyze and design stack and queue data structure
- Design tree data structure for real life applications
- Design linked list and graph data structure for real life applications

A. OUTLINE OF THE COURSE

Unit No.	Title of the unit	Time required for the Unit (Hours)
1.	Complexity, Memory Allocation, and Arrays	08
2.	Sorting Techniques and Linked List	07
3.	Stack and Queue	08
4.	Tree and its Applications	08
5.	Graphs	08

B.

DETAILED SYLLABUS

Unit	Unit Details	
1.	Complexity, Memory Al	location, Arrays, and Searching Techniques
	•	Introduction of Unit
	•	Classification of data structures: primitive and non-primitive
	•	Applications of data structures
	•	Time and space complexity of an algorithm
	•	Asymptotic Notations
	•	Memory allocation functions: Malloc(), Calloc(), free() and realloc()
	•	Array Operations
	•	Search Techniques: Sequential search
	•	Iterative and Recursive methods-Binary search
	•	Conclusion of Unit
2.	Sorting Techniques and	Linked List
	•	Introduction of Unit
	•	Sorting: General background and definition,
	•	Bubble sort, Selection sort and Insertion sort

	•	Merge sort and Quick sort.
	•	Radix Sorts
	•	Complexity of Sorting Algorithms
	•	Components of linked list, Representation of linked list,
	•	Advantages and disadvantages of linked list.
	•	Types of linked list: Singly linked list, doubly linked list, Circular linked list,
	•	Operations on singly linked list: creation, insertion, deletion, search and display.
	•	Conclusion of Unit
3.	Stack and Queue	
	•	Introduction of Unit
	•	Stack – Definition, Array representation of stack,
	•	Operations on stack: Infix, prefix and postfix notations,
	•	Conversion of an arithmetic expression from Infix to postfix,
	•	Applications of stacks.
	•	Queue: Definition, Array representation of queue,
	• Priority queue,	Types of queue: Simple queue, Circular queue, Double ended queue (deque),
	•	Operations on all types of Queues
	•	Conclusion of Unit
4.	Tree and its Applicatio	ns
	•	Introduction of Unit
	•	Binary Trees - Operations on Binary trees
	•	Binary Tree Representations - node representation,
	•	Internal and external nodes, implicit array representation
	•	Binary Search Tree (BST),
	•	BST Insertions, Searching, Traversing and Deletions
	•	Introduction to AVL Tree, Heap Tree and General trees
	•	Conclusion of Unit
5.	Graphs	
	•	Introduction of Unit
	•	Graphs - An application of graphs - Representation

•	Shortest path algorithm - a flow Problem
•	Dijkstra's algorithm - An application of scheduling
•	Graph Traversals
•	Minimum Spanning Tree- Prims and Kruskal's Algorithm
• Conclusion of Unit

Python Programming

3 Credits [LTP: 3-0-0]

COURSE OUTCOME

The student would be able to:

- Memorize Python basics and its data types.
- Use flow control to solve problems.
- Create functions to facilitate code reuse and flow control structure.
- Interpret the fundamental Python syntax and semantics and be fluent in the use of Python control flow statements.
- Identify the commonly used operations involving file systems and regular expressions.

A. OUTLINE OF THE COURSE

1.	Introduction To Python and Data Types	08
2.	Python Program Flow Control	07
3.	Python Functions, Modules and Packages	08
4.	Python String, List and Dictionary Manipulations	07
5.	Python File Operation	08

B.

DETAILED SYLLABUS

Unit	Unit Details							
1.	Introduction To Python and Data Types							
	Introduction of Unit							
	Installation and Working with Python							
	•	Understanding Python variables, Operators						
	Understanding python blocks							
	• Declaring and using Numeric data types: int, float, complex							
	• Using string data type and string operations							
	•	Defining list and list slicing						
	•	Use of Tuple data type						
	•	Conclusion of Unit						
2.	Python Program Flow C	ontrol						
	•	Introduction of Unit						
	• Conditional blocks using if, else and elif							
	•	Simple for loops in python						

	For loop using ranges, string, list and dictionaries						
	•	Use of while loops in python					
	•	Loop manipulation using pass, continue, break and else					
	•	Programming using Python conditional and loops block					
	•	Conclusion of Unit					
3.	Python Functions, Mod	iles And Packages					
	•	Introduction of Unit					
	•	Organizing python codes using functions					
	•	Organizing python projects into modules					
	•	Importing own module as well as external modules					
	•	Understanding Packages					
	•	Powerful Lamda function in python					
	•	Programming using functions, modules and external packages					
	•	Conclusion of Unit					
4.	Python String, List and	Dictionary Manipulations					
	•	Introduction of Unit					
	•	Building blocks of python programs					
	•	Understanding string in build methods					
	•	List manipulation using in build methods					
	•	Dictionary manipulation					
	•	Programming using string, list and dictionary in build functions.					
	•	Conclusion of Unit					
5.	Python File Operation						
	•	Introduction of Unit					
	•	Reading various types of files in python					
	•	Writing log files in python					
	•	Understanding read functions, read(), readline() and readlines()					
	•	Understanding write functions, write() and writelines()					
	•	Manipulating file pointer using seek					
	•	Programming using file operations.

Linux Shell Programming

3 Credits [LTP: 3-0-0]

COURSE OUTCOME

Students will be able to:

- Use various Linux commands that are used to manipulate system operations at admin level and a prerequisite to pursue job as a Network administrator.
- Write Shell Programming using Linux commands.
- Design and write application to manipulate internal kernel level Linux File System.
- Develop IPC-API's that can be used to control various processes for synchronization.
- Develop Network Programming that allows applications to make efficient use of resources available on different machines in a network.

Programming in C Lab

amming in C Lab

1 Credits [LTP: 0-0-2]

Course Outcome:-

Students will be able to:

- Demonstrate concept of functional hierarchical code organization.
- Work with textual information, characters and strings
- Implement file handling concepts
- Implement real time applications using the power of C language features.
- Handle possible errors during program execution.
- A. LIST OF EXPERIMENTS:

2 Write a program that reads a floating point number and then displays the right-most digit of the integral part of the number. 3 Write a C program to calculate the sum of digits of given number. 4 Program to find largest and smallest number from four given number. 5 Program to find whether a year is leap or not. 6 Write a C program to convert Decimal number by the user and perform the operation of Sum of digits of entered number. 7 Write a C Program to convert Decimal number to Binary number. 8 Find the sum of this series up to n terms 1+2+3+4+5+6+ 9 Program to convert years into Minute, Hours, Days, Months, Seconds using switch () statements 11 Write a program to generate the various pattern of numbers 12 Write a C renu driven program 12 Write a C Program to perform the factorial of given number 13 Write a C program to perform the factorial of given number 14 Write a C program to calculate factorial of a number using recursion 15 Write a C program to calculate factorial of a number using recursion 16 Write a C program to perform to perform Matrix addition and multiplication operations 17 Write a C program to determine the length of the string and find its equivalent ASCII codes. 20	1	Given the values of the variables x, y and z, write a program to rotate their values such that x has the value of y, y has the value of z, and z has the value of x
 Write a C program to calculate the sum of digits of given number. Program to find largest and smallest number from four given number. Program to find whether a year is leap or not. Write a C program in which enter any number by the user and perform the operation of Sum of digits of entered number. Write a C Program to convert Decimal number to Binary number. Find the sum of this series up to n terms 1+2+3+4+5+6+	2	Write a program that reads a floating point number and then displays the right-most digit of the integral part of the number.
 4 Program to find largest and smallest number from four given number. 5 Program to find whether a year is leap or not. 6 Write a C program in which enter any number by the user and perform the operation of Sum of digits of entered number. 7 Write a C Program to convert Decimal number to Binary number. 8 Find the sum of this series up to n terms 1+2+3+4+5+6+	3	Write a C program to calculate the sum of digits of given number.
 5 Program to find whether a year is leap or not. 6 Write a C program in which enter any number by the user and perform the operation of Sum of digits of entered number. 7 Write a C Program to convert Decimal number to Binary number. 8 Find the sum of this series up to n terms 1+2+3+4+5+6+	4	Program to find largest and smallest number from four given number.
 6 Write a C program in which enter any number by the user and perform the operation of Sum of digits of entered number. 7 Write a C Program to convert Decimal number to Binary number. 8 Find the sum of this series up to n terms 1+2+3+4+5+6+	5	Program to find whether a year is leap or not.
 7 Write a C Program to convert Decimal number to Binary number. 8 Find the sum of this series up to n terms 1+2+3+4+5+6+ 9 Program to print Armstrong's numbers from 1 to 100. 10 Write a program to convert years into Minute, Hours, Days, Months, Seconds using switch () statements 11 Write a C menu driven program 12 Write a program to generate the various pattern of numbers 13 Write a C Program to print the reverse of an integer number 14 Write a C program to perform the factorial of given number 15 Write a C program to calculate factorial of a number using recursion 17 Write a C program to calculate factorial of a number using recursion 17 Write a C program to perform to perform Matrix addition and multiplication operations 19 Write a program to determine the length of the string and find its equivalent ASCII codes. 20 Write a program to delete all the occurrences of the vowels in a given text. Assume that the text length will be of 	6	Write a C program in which enter any number by the user and perform the operation of Sum of digits of entered number.
 Find the sum of this series up to n terms 1+2+3+4+5+6+	7	Write a C Program to convert Decimal number to Binary number.
 9 Program to print Armstrong's numbers from 1 to 100. 10 Write a program to convert years into Minute, Hours, Days, Months, Seconds using switch () statements 11 Write a C menu driven program 12 Write a program to generate the various pattern of numbers 13 Write a C Program to print the reverse of an integer number 14 Write a C program to perform the factorial of given number 15 Write a C program in which a function prime that returns 1 if its argument is a prime and return zero otherwise. 16 Write a C program to calculate factorial of a number using recursion 17 Write a C program to perform to perform Matrix addition and multiplication operations 19 Write a program to delete all the occurrences of the vowels in a given text. Assume that the text length will be of 	8	Find the sum of this series up to n terms 1+2+3+4+5+6+

CO4	-	3	2	2	-	-	-	-	-	-	-	-	-	-	-
CO5	-	-	2	1	-	-	-	-	-	-	-	-	-	-	-

Note: On the basis of mapping of COs with POs, this course is related to Employability/Skill Development

Code: MCACCA1202

Data Structure and Algorithms Lab

1 Credit [LTP: 0-0-2]

Course Outcome:-

Students will be able to:

- Develop skills to design and analyze simple linear and nonlinear data structures.
- Choose appropriate data structures to represent data items in real world.
- Implement and know the application of algorithms for sorting and searching and data items.
- Design data structures such as stacks, queues, hash tables, binary trees, search trees, heaps, graphs, and B-trees according to the requirement of software.
- Implement ADTs such as lists, graphs, search trees in C to solve problems

A. LIST f PROGRAMS:

1.	Write a program to implement the linear array operations.
	(a) Insertanintegerintoagivenposition inan array.
	(b) Deletinganintegerfromanarray.
2.	Write a program to perform the following operations on matrix using array: Addition, Multiplication, Transpose
3.	Write a program to implement binary search.
4.	WriteaprogramtosortNnumbersusingselectionsort.
5.	WriteaprogramtosortNnumbersusingbubblesort.
	WriteaprogramtosortNnumbersusinginsertionsort.
6.	
7	Writeaprogramtoimplement mergesort
'	Writeaprogramtoimplement quicksort.
8	······································
	Write a program to implement stack operations
9.	
10	Write a program to implement queue operations
10.	Creatingabinarysearchtree andtraversingitusinginorder, preorderandpost order.
11.	ereutingueman jseurennee undru vereingneengreerigereerung ost erder.
	Perform deletion operation on binary search tree
12.	
10	Create singly linked list and perform following operations on it.
13.	Insertinganodeinto asinglylinkedlist
14.	insertinganouento asingrymikeunst.
	Deletinga nodefromasinglylinkedlist.
15.	
1.0	Searching a node from a singly linked list.
16.	Create a doubly linked list and perform insertion and deletion operations
17.	create a doubry mixed list and perform insertion and deletion operations
	Write a program to implement BFS & DFS
18.

B.

Code: MCACCA1203

COURSE OUTCOME

Students will be able to:

• Get the basic set of commands and utilities in Linux/UNIX systems

Python Programming Lab

- Able to work on VI editor and its commands
- Apply the concept of shell script to do basic programming.
- Implement Shell script to perform conditional statements
- Implement Shell script to perform Looping statements.

A. LIST OF EXPERIMENTS:

1	Study of Linux basic commands: cal, date, echo, printf, bc, script, mailx, passwd, who, uname, tty, stty, pwd, cd,
	mkdir, rmdir, ls, cat, cp, rm, mv, more, file, wc, od, cmp,comm, diff, chmod, vi.
2	Study of vi editor
3	Write a Script to print "hello world"
4	Write a script to create function.
5	Write a script to implement local variables.
6	Write a script to implement ifelse.
7	Write a script to study for, while and until
8	Write a script that finds the prime factors of a given number.
9	a) Write a script to check if the two strings are same or not.
	b) Write a shell script to check the given number is Odd/Even
10	Write a script that will print a message "Good Morning" or "Good Afternoon" according to the user login time
11	Linux Commands: cmp, find, grep, od, tar, ps, df, du, finge, kill, nice, nonhup, sleep, test, umask, who, cal, tee, expr, uname, fsck, xargs. Filters for stream handling features of the shell for input and output. E.g. pr, head, tail,
	cut, paste, sort, nl, uniq, tr.
12	a) Write a shell script to show the Palindrome number
	b) Write a script to show the Factorial value of the given value

	CO5	-	-	2	1		-	-	-	-	-	-	-	-	-	-

Code: MCACCA1204

COURSE OUTCOME

Students will be able to:

- Use shell script to create files and handle text documents
- Create child processes, background process and zombies
- Familiarize basic concepts of shell programming
- Demonstrate use of system calls
- Demonstrate Inter process communication

A. LIST OF EXPERIMENTS:

1	Study and Practice on various commands like man, passwd, tty, script, clear, date, cal, cp, mv,ln, rm, unlink, mkdir, rmdir, du, df, mount, umount, find, unmask, ulimit, ps, who, w.
2	Study and Practice on various commands like cat, tail, head, sort, nl, uniq, grep, egrep, fgrep, cut, paste, join, tee, pg, comm, cmp, diff, tr, awk, tar, cpio.
3	a) Write a Shell Program to print all .txt files and .c files.b) Write a Shell program to move a set of files to a specified directory.
4	c) Write a Shell program to display all the users who are currently logged in after a specified time.d) Write a Shell Program to wish the user based on the login time.
5	a) Simulate cat command. b) Simulate cpcommand.
6	a) Simulate head command. b) Simulate tail command.
7	a) Simulate mv command. b) Simulate nlcommand.
8	Write a program to handle the signals like SIGINT, SIGQUIT, SIGFPE.
9	Implement the following IPC forms a) FIFO b) PIPE
10	Implement message queue form of IPC.
11	Implement shared memory form of IPC.
12	Write a Socket program to print system date and time (Using TCP/IP).

Minor Courses

Theory

	Code: MCDCCA1101	Fundamentals of Artificial Intelligence and Data Science	3 Credits [LTP: 3-0-0]
0	COURSE OUTCOME		

Students will be able to:

- Describe the applications of Artificial Intelligence and subsets of Artificial Intelligence
 - Analyze and solve real-world problems using Artificial Intelligence techniques
- Analyze formal methods of knowledge representation, logic and reasoning on real-world problems
- Determine the various aspects of data science and apply in various fields
- Apply Data preprocessing techniques for creation of datasets

Ability Enhancement Courses (AEC)

Code:MULCHU1201

Personality Development and Emotional Intelligence

1 Credit [LTP:0-0-2]

Course Outcomes:

On successful completion of the course the learners will be able to

- Realize the art of Power Dressing and making a great first impression by polishing their Corporate/ Business manners.
- Enhance their self-esteem, confidence and assertive behaviour to handle difficult situations with grace, style, and professionalism.
- Apply the understanding of harmony in existence in their profession and lead an ethical life.
- Recognize and use emotional intelligence to create and maintain productive workplace relationships and team environment.
- Apply collaborative, inclusive and creative communication skills.

А.

OUTLINE OF THE COURSE

Unit	Title of the Unit	Time required for the
No.		Unit (Hours)
1	Personal Grooming & Attitude Building	6
2	Mentoring & Interpersonal Skills	6
3	Conflict & Stress Management	7
4	Social Skills Development	7
5	Self Esteem Enhancement	2

Skill Enhancement Courses (SEC)

Code:MULCSE1201

Skill Enhancement Generic Course-I

1 Credit [LTP:0-0-2]

COURSE OUTCOMES:

Students will be able to:

CO.1: Enhance problem solving skills.

CO.2: Prepare for various public and private sector exams & placement drives

CO.3: Communicate effectively & appropriately in real life situation.

CO.4: Improve verbal ability skill among students.

CO.5: Enrich their knowledge and to develop their logical reasoning thinking ability.

	LIST OF ACTIVITIES					
1	SMART Goals, Goal Setting (IKIGAI), Wheel of Satisfaction, Exchanging pleasantries					
2	Root Words, Prefix-Suffix, Antonyms, Synonyms & Analogies, Sentence Correction-1					
3	Numbers, Relations & Functions, HCF & LCM, Average & Divisibility					
4	Resume Tips & Resume Review					
5	How to win friends & Influence people, Sentence Correction-2					
6	Series & Progressions					
7	Number Series & Letter Series, Crypto-arithmetic, SWOT/SWOC					
8	Percentage, Profit & Loss, Ratio Proportion, CI & SI					
9	Mixtures and Allegations, Short Cut Tricks, Seating Arrangement, Sequencing & Ranking					
10	Surds & Indices, Problem on ages, Solving Equations - Quadratic & Linear					
11	Time & Distance, Boats & Streams, Clocks and Calendars					
12	GD, Practice of GD, Reading and Comprehension					

Semester-II

OOPs with Java

COURSE OUTCOME

- Describe the concepts and features of object oriented programming
- Execute java's exception handling mechanism, multithreading, packages and interfaces.
- Implement object oriented programming concepts using java
- Apply object oriented programming features and concepts for solving given problem
- Implement the concept of class and objects with access control to represent real world entities.

A. OUTLINE OF THE COURSE

Unit No.	Title of The Unit	Time required for the Unit (Hours)
1.	Introduction to Java	08
2.	Working with classes ,objects and Inheritance	09
3.	Packages, Interfaces & Exception Handling	09
4.	Multithreaded Programming & Applet	07
5.	JAVA Database Connectivity (JDBC) and Java 8 Features	07

B. DETAILED SYLLABUS

Unit	Unit Details	
1.	Introduction to Java	
	•	Introduction to Unit
	•	History and Overview of Java
	•	Object Oriented Programming features.
	•	Class Fundamentals
	•	Declaring objects, Assigning object reference variables.
	•	Literals, variables comments, separators,
	•	Scope and Life Time of Variables
	•	Data types - Integers, Floating point, characters, Boolean,
	•	Type conversion and casting
	• Logical operators, Assig	Operators - Arithmetic operators, Bit wise operators, Relational Operators, Boolean gnment Operator, Operator Precedence.
	•	Conclusion of unit
2.	Working with classes, obj	ects and Inheritance
	•	Introduction to Unit
	•	Control Statements - Selection Statements - if, Switch, Iteration Statements - While,

	Do-while, for Nested loops, Jump statements.
	• Methods - constructors, "this" keyword, finalize () method A stack class, Over loading methods. Using objects as parameters, Argument passing, Returning objects.
	• Recursion, Access control, introducing final, understanding static.
	• Introducing Nested and Inner classes.
	• Command line arguments.
	• Inheritance – Basics, Using super, method overriding, and Dynamic method Dispatch, Using abstract classes and final with Inheritance.
	• Conclusion of Unit
3.	Packages, Interfaces & Exception Handling
	Introduction to Unit
	• Definition and Implementation, Access protection importing packages.
	• Interfaces: Definition and implementation.
	• Exception Handling – Fundamentals, types, Using try and catch
	• Multiple catch clauses
	• Nested try Statements, Throw, finally.
	• User Defined Exception
	• Conclusion of Unit
4.	Multithreaded Programming & Applet
	Introduction of Unit
	• Java thread model – main thread, creating single Multithreading
	• Is alive () and join () Methods
	• Thread – Priorities, Synchronization
	• Inter thread communication, suspending, resuming and stopping threads
	• Reading control input, writing control output, Reading and Writing files.
	• Applet Fundamentals – AWT package
	• AWT Event handling concepts.
	Conclusion of Unit
5.	JAVA Database Connectivity (JDBC) and Java 8 Features
	Introduction to Unit
	• Database connectivity – JDBC architecture and Drivers.
	• JDBC API - loading a driver, connecting to a database, creating and executing JDBC

statements	
•	Handling SQL exceptions.
•	Accessing result sets: types and methods.
•	JDBC application to query a database.
•	Introduction to java 8 features :-Functional Interfaces And Lambda Expressions
•	Conclusion of Unit

Design and Analysis of Algorithm

3 Credits [LTP: 3-0-0]

COURSE OUTCOME

After completion of the course, the students will be able to:

- Analyze the asymptotic performance of algorithms
- Choose appropriate algorithm design paradigm like Divide and Conquer and Greedy for solving engineering problems
- Apply Dynamic Programming and Backtracking to solve engineering problems
- Solve common engineering design problems using Randomize algorithms
- Evaluate arithmetic expressions using parallel model.

A. OUTLINE OF THE COURSE

Unit No.	Title of The Unit	Time required for the Unit (Hours)
1,	Introduction to Analysis of Algorithms	07
2.	Divide and Conquer and Greedy Methods	08
3.	Dynamic Programming and Backtracking	08
4.	Randomized Algorithms	07
5.	Parallel Models	07

B.DETAILED SYLLABUS

Unit	Unit Details								
1.	Introduction to Analysis of Algorithms								
	Introduction of Unit								
	 Algorithm definition and specification, Design of Algorithms, and Complexity of Algorithms, Asymptotic Notations, Growth of function, Recurrences, Performance analysis 								
	• Elementary Data structures:- stacks and queues, trees, dictionaries, priority que sets and disjoint set union, graphs, basic traversal and search techniques.								
	• Conclusion of Unit								
2.	Divide and Conquer and Greedy Methods								
	Introduction of Unit								
	• Divide and conquer:- General method, binary search, merge sort, Quick sort,								
	• The Greedy method:-General method, knapsack problem, minimum cost spanning tree, single source shortest path.								
	• Conclusion of Unit								
3.	Dynamic Programming and Backtracking								
	Introduction of Unit								
	• Dynamic Programming, general method, multistage graphs, all pair shortest path,								

	optimal binary search trees, 0/1 Knapsack, traveling salesman problem, flow shop scheduling.
	• Backtracking:- general method, 8-Queens problem, sum of subsets, graph coloring, Hamiltonian cycles, knapsack problem, Branch and bound:- The Method, 0/1 Knapsack problem, traveling salesperson.
	Conclusion of Unit
4.	Randomized Algorithms
	Introduction of Unit
	 Randomized Algorithms: Las Vegas algorithms, Monte Carlo algorithms, randomized algorithm for Min-Cut, randomized algorithm for 2- SAT. Problem definition of Multicommodity flow, Flow shop scheduling and Network capacity assignment problems. Conclusion of Unit
5.	Parallel Models
	Introduction of Unit
	• Parallel models:-Basic concepts, performance Measures,
	• Parallel Algorithms: Parallel complexity, Analysis of Parallel Addition, Parallel Multiplication and division
	• Parallel Evaluation of General Arithmetic Expressions, First-Order Linear recurrence.
	• Conclusion of Unit

MAPPING OF CO VS PO/PSO

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3
CO1	-	-	3	-	-	-	-	-	-	-	-	-	-	-	-
CO2	3	-	-	-	-	-	-		-	-	-	-	-	-	-
CO3	2	3	2	-	-	-	-		-	-	-	-	-	-	-
CO4	-	2	3	2	-	-	-	-		-	-	-	-	-	-
CO5	-	-	-	-		-	-	-		-	-	-	-	-	-

Course Outcome

Students will be able to

- Describe DBMS architecture, physical and logical database designs, database modeling, relational, hierarchical and network models.
- Identify basic database storage structures and access techniques such as file organizations, indexing methods including B-tree, and hashing.
- Learn and apply structured query language (SQL) for database definition and database manipulation.
- Demonstrate an understanding of normalization theory and apply such knowledge to the normalization of a database.
- Learn various transaction processing, concurrency control mechanisms and database protection mechanisms.

A. OUTLINE OF THE COURSE

Unit No.	Title of the unit	Time required for the Unit (Hours)
1	Introduction to Database Management System	7
2	RDBMS	7
3	SQL	7
4	PL/SQL	8
5	Oracle, Trigger and wrapping	7

B. DETAILED SYLLABUS

Unit	Unit Details
1.	Introduction to Database Management System
	Introduction to Database Management System
	Characteristics of database approach
	Advantages of DBMS
	• Schemas: Three schema architecture - The external level, the conceptual level and the internal level.
	Data Independence
	Database languages and Interfaces
	Roles of Database Administrator
	Introduction to Data Models (Hierarchical, Network and Relation)
	• Entity type, Entity sets, Attributes and keys.
	• The ER Model: ER Diagram & Database design with the ER Model
	Conclusion of the Unit
2.	RDBMS
	Introduction to Distributed Database
	Classification of DBMS
	Introduction to RDBMS
	Relational Model –Concepts
	• Relational operations (Insert, delete, update, select, project, rename, union, intersection, minus, Join,
	division)
	Transactions and ER mapping Examples
	 Normalization of RDBMS (1NF, 2NF, 3NF and 4NF) and inference rules.
	Conclusion of the Unit
3.	SQL
	• Introduction to Unit
	DBMS v/s RDBMS
	Introduction to SQL: Data types, Constraints
	Commands in SQL: Create table, Drop command, Alter Queries in SQL
	• Statements in SQL (Insert, delete and update)
	• Features of SQL
	Manipulation of data
	Tables in SQL

PU/Batch 2023-25/FCE/Syllabus/MCA AI &DS

	•	Conclusion of the Unit										
4.	PL/SQ	L										
	•	Introduction to PL/SQL										
	•	• Approaches to database programming: with function calls, Embedded SQL using CURSORs,										
	D	Dynamic SQL, SQL commands in Java, Retrieving multiple triples using Iterators										
	•	Advantages of PL/SQL										
	•	• Features of PL/SQL :Blocks structure, Error handling, Input and output designing, variables and										
	С	onstant, data abstraction, control structures and subprogram										
	•	Fundamentals of PL/SQL : character sets, lexical, delimeters, identifiers, declarations, scope and										
	vi	isibility, Static and dynamic and static SQL, Implicit and explicit locking										
	•	Conclusion of the Unit										
5.	Oracle	, Trigger and wrapping										
	•	Introduction to Oracle, Trigger and wrapping										
	•	Functions/responsibilities of DBA										
	•	Oracle product details										
	•	Oracle files, System and User process										
	•	Oracle Memory										
	•	Protecting data: Oracle backup & recovery										
	•	Triggers - types, uses, data access for triggers										
	•	PL/SQL Packages and Wrapping										
	•	Conclusion of the Unit

PRACTICALS

Code:MCACCA2201

OOPS with Java Lab

1 Credit [LTP: 0-0-2]

Course Outcomes:

Students will be able to:

- Implement object oriented programming concepts to solve real world problems
- Implement the concept of class and objects with access control to represent real world entities.
- Apply different techniques on creating and accessing packages (fully qualified name and import statements).
- Create concepts on file streams and operations in java programming for a given application programs
- Create the backend connectivity process in java program by using JDBC drivers

A. LIST OF EXPERIMENTS:

1	A. Write a program to print "Hello World" in Java.
	B. Write a program to add two numbers
	C. Write a program to demonstrate the different access specifiers
	D. Write a program which uses different packages
2	A. Write a program to demonstrate inheritance, abstraction, encapsulation and Polymorphism.
	B. Write a program to find the factorial of n numbers
	C. Write a program to calculate Fibonacci series
	D. Write a program to add n numbers and series
3	A. Write a program to create an array and store elements into the array.
	B. Write a program to find the sum of elements in an array
	C. Write a program to demonstrate switch case, if, if-else and for loop
4	A. Write a program to demonstrate the working of methods.
	B. Write a program which has four methods – add(), subtract(), multiply() and divide() and demonstrate
	a simple console calculator.
	C. Write a program to accept command line arguments and display them to the user
5	A. Write a program to create a package.
	B. Write a program to handle different exceptions
6	A.Write a program to demonstrate try-catch, throw and throws.
	B. Write a program for user defined exception
7	A. Write a program to read a file
	Write a program to write into a file
8	Write a program to demonstrate client server communication (socket programming)
9	Write a program to create threads and manipulate them
10	Write a program to create a user interface to check user authentication.
11	Write a program to create a registration form and save the details into a file
12	Write a program to save and fetch the details from database

Data Base Management System Lab

1 Credit [LTP: 0-0-2]

Course Outcome:-

Students will be able:

- Appreciate, define and effectively demonstrate the underlying concepts of database technologies.
- Design and implement a database schema for a given problem-domain.
- Populate and query a database using SQL DML/DDL commands.
- Declare and enforce integrity constraints on a database using a state-of-the-art RDBMS.
- Programming PL/SQL including stored procedures, stored functions, cursors, packages.

A. LIST OF EXPERIMENTS:

1.	. To setup and removal phases of a Student database using the basic Data Definition Language (DDL)									
	commands:									
	1. CREATE									
	2. ALTER									
	3. DROP									
	4. RENAME									
	5. TRUNCATE									
2.	The routine operation of the Employee database like retrieve, insert and modify by basic Data									
	Manipulation Language (DML) commands:									
	1. INSERT									
	2. UPDATE									
	3. DELETE									
3.	To Retrieve data from one or more tables using DATA RETRIEVAL LANGUAGE (DRL) commands									
	• SELECT FROM									
	• SELECT - FROM –WHERE									
	SELECT - FROM - GROUP BY									
	• SELECT FROM ODDED BY									
	• SELECT - IROM -ORDER DI									
	• JOIN USING SELECT - FROM - ORDER DI									
	• JOIN using SELECT - FROM - GROUP BY									
	• UNION									
	• INTERSET									
	MINUS									
4.	DATA CONTROL LANGUAGE (DCL) and TRANSATIONAL CONTROL LANGUAGE (TCL)									
	commands.									
	i. Creating objects: tables, views, users, sequences, Collections etc.									
	ii. Privilege management through the Grant and Revoke commands									
	iii. Transaction processing using Commit and Rollback									
	iv. Save points.									
5.	Queries for following functions									
	i. Conversion functions (to_char, to_number and to_date)									
	ii. string functions (Concatenation, lpad, rpad, ltrim, rtrim, lower, upper, initcap, length, substr and									
	instr),									
	iii. date functions (Sysdate, next_day, add_months, last_day, months_between, least, greatest,									
	trunc, round, to_char, to_date)									
6.	Simple queries: selection, projection, sorting on a simple table for employee database									
	i. Small-large number of attributes									
	ii. Distinct output values									
	iii. Renaming attributes									
	iv. Computed attributes									
	v. Simple-complex conditions (AND, OR, NOT)									
	vi. Partial Matching operators (LIKE, %, _, *, ?)									
	vii. ASC-DESC ordering combinations									
	viii. Checking for Nulls									

7.	To manip	pulate data items and returning the results using Group functions or Aggregate functions and
	Single Ro	ow or scalar functions:
	i. (Group functions or Aggregate functions: Sum(), Avg(), Min(), Max() and Count()
	ii. S	Single Row or scalar function: Abs(), Power(), Sqrt(), Round(), Exp(), Greastest(), Least(),
	I	Mod(), Floor(), Sign() and Log().
8.	Multi-tab	le queries (JOIN OPERATIONS)
	i. S	Simple joins (no INNER JOIN)
	ii. A	Aliasing tables – Full/Partial name qualification
	iii. l	Inner-joins (two and more (different) tables)
	iv. l	Inner-recursive-joins (joining to itself)
	v. (Outer-joins (restrictions as part of the WHERE and ON clauses)
	vi. I	Using where & having clauses
9.	Write Ne	sted queries to retrieve the name of each employee who has a dependent with the same first
	name and	same sex as the employee using following Nested queries.
	i. l	In, Not In
	ii. l	Exists, Not Exists
	iii. l	Dynamic relations (as part of SELECT, FROM, and WHERE clauses)
10	Write a c	uery to make a list of all project numbers for projects that involve an employee whose last
	name is '	Smith', either as a worker or as a manager of the department that controls the project using the
	following	set Oriented Operations
	i. I	Union
	ii. l	Difference
	iii. l	Intersection
	iv. l	Division
11	PL/SQL I	Programming using the following
	i. l	Programs using named and unnamed blocks
	ii. l	Programs using Cursors, Cursor loops and records
12	PL/SQL I	Programming using
	i. (Creating stored procedures, functions and packages
	ii. l	Error handling and Exception
	iii.	Triggers and auditing triggers

Data Science and Analytics

3 Credits [LTP: 3-0-0]

COURSE OUTCOME Students will be able to:

- Implement statistics and probability in data science
- Analyze the data using algorithms
- Design mathematical model for decision making using business intelligence
- Implement the techniques of web data analytics
- Apply social media analytics process and evaluate metrics.

A. OUTLINE OF THE COURSE

Unit No.	Title of The Unit	Time required for the Unit (Hours)
1	Statistics	08
2	Data Analytics	07
3	Business Intelligence	08
4	Web Data Analytics	07
5	Analytics in social Media	07

B. DETAILED SYLLABUS

Unit	Unit Details					
1.	Statistics					
	Introduction of Unit					
	Introduction to Statistics and Probability					
	• Basic terminologies, contingency table, frequency and cross table, gra					
	histogram and frequency polygon, Random variables, statistical properties of random variables,					
	Expectation, jointly distributed random variables, moment generating function, characteristic function,					
	limit theorems, probability, trial, events, types of events, apriori probability, statistical or empirical probability. Bayes theorem.					
	Regression and Correlation					
	• Introduction to linear model, properties of regression coefficients, Spurious regression concepts, significance of regression coefficients using t test and E test, concepts of auto					
	correlation, multiple linear regression analysis, correlation analysis, properties of correlation					
	coefficients, significance of single correlation coefficient, significance of multiple correlation coefficients, concepts of multiple correlation and partial correlation					
	Conclusion of Unit					
2.	Data Analytics					
	Introduction of Unit					
	• Data Analytics Lifecycle: Overview - Discovery - Data Preparation - Mo					
	Planning - Model Building - Communicate Results – Operationalize					
	Regression analysis					
	Classification techniques					
	• Clustering					

	•	Association rules analysis			
	•	Conclusion of Unit			
3.	Business Intelligence				
	•	Introduction of Unit			
	•	Business intelligence: Definition - Effective and timely decisions - data,			
	information and knowledge – role of mathematical models - BI architectures.				
	Decision Support Systems: Definition - Representation of the decision-ma				
	process - Evolution of information systems development of DSS.				
	•	Mathematical models for decision making: Structure - development of a model			
	- classes of models				
	•	Conclusion of Unit			
4.	Web Data Analytics				
	•	Introduction to Web Analytics 2.0			
	•	Clickstream			
	•	Multiple outcome analysis			
	• Experimentation and testing				
	Voice of customer				
	Competitive intelligence				
	• The tactical shift				
	•	Optimal strategy for choosing web analytics			
	•	Conclusion of Unit			
5.	Analytics in social Media	l			
	•	Introduction to Analytics in social Media			
	•	Types of analytics. Dedicated Vs. Hybrid Tools			
	•	Data Integration Tools			
	•	Best Setup			
	•	Social Network Landscape: Concept and UX on social networks			
	•	Interactivity of social network			
	•	Content flow on social network			
	•	Interaction Pattern between users			
	•	Social Media as a two way channel.			
	•	Conclusion of Unit

Machine Learning

COURSE OUTCOME

After completion of the course, the students will be able to:

- Demonstrate and distinguish between types of machine learning techniques
- Examine the correlation coefficient for a given data set
- Implement applications with classification and clustering techniques
- Examine the uses of appropriate performance metrics of machine learning
- Modify existing machine learning algorithms to improve classification efficiency

A. OUTLINE OF THE COURSE

PRACTICAL

R Programming Lab

1 Credit [LTP: 0-0-2]

Course outcomes:

Students will be able to:

- Run the procedure to read and write different format of data set into R environment
- apply function in R programming language
- Implement different options in I/O operations in R programming Language,
- interpret of summary statistics and test hypothesis
- perform non-parametric testing of hypothesis in R

A. LIST of EXPERIMENTS

Part A											
	1.	Install and configure R, set working directory.									
	2.	Install Packages and calling installed packages									
	3.	R studio environment and functionalities of R studio									
	4.	Implement basic R operations (data input, missing values, importing data into R using different formats : xlsx, CSV, Text files)									
	5.	Use R as a calculator									
	6.	Explore various functionalities of dataframes.									
	7.	Create data set using data frames, list and tables.									
	8.	Create the contingency table for the given raw data.									
	9.	Create the interactive user input code line in r using readline () function.									
	10.	Create the contingency table for the given vector format data.									
	11.	Convert the contingency table to original format of the given data.									
	12.	Analyse and give interpretation of summary statistics for the given data.									
	13.	Calculate mean, median and mode for the grouped data and compare the results for the given data.									
	14.	Analyse the given data for non-parametric tests and give the interpretations.									
	15.	Use R for test the given data									
		In order to compare the effectiveness of two sources of nitrogen, namely ammonium chloride (NH4Cl) and urea, on grain yield of Coarse cereal, an experiment was conducted. The results on the grain yield of Coarse Cereal (kg/plot) under the two treatments are given below.									
	NH4CI:					,,	, 17.0, 10	, 10.0,			
--------	--	---	---	---	---	---	--	---	---	--	---
	Urea : 12.	.0, 11.7,	10.7, 11	.2, 14.8,	14.4, 13.9	9, 13.7, 1	6.9, 16.0,	15.6, 16	.0.		
	Assess whi	ich sour	of nitr	ogen is h	attar for	Coarse C	araal				
	ASSESS WII	ien soure		ogen is o			cicai.				
Part B											
	16. Before an i	increasin	ig in exe	ercise dut	y on tea	, 800 per	sons out	of a san	nple of 1	000 pers	ons we
	found to be	e tea drir	nkers. Af	fter an in	creasing	in duty,	800 peop	le were	tea drinke	ers in a s	sample

Ability Enhancement Courses (AEC)

Code:MULCHU2201

Spoken English & Communication Skills- I

1 Credit [LTP: 0-0-2]

Course Outcomes:

Students will be able to:

- Prepare and deliver a clear and fluent demonstrative, informative, and persuasive presentation and enlarge their vocabulary by keeping a vocabulary journal.
- Classify the factors that influence use of grammar and vocabulary in speech and writing.
- Recognize and Consciously Use English to Create and Maintain Productive work in professional and educational settings.
- Enhance their language proficiency in writing by identifying the errors and rectifying them.
- Generate a pile of ideas by examining issues in greater depth, looking at different dimensions of these issues.

Skill Enhancement Courses (SEC)

Code:MULCSE2201

Skill Enhancement Generic Course -II

1 Credit [LTP: 0-0-2]

COURSEOUTCOMES:

Students will be able to:

CO.1: Enhance problem solving skills.

CO.2: Prepare for various public and private sector exams & placement drives

- CO.3: Communicate effectively & appropriately in real life situation.
- CO.4: Improve verbal ability skill among students.
- CO.5: Enrich their knowledge and to develop their logical reasoning thinking ability.

	LIST OF LABS						
1	Types of Interviews, Interview Practice						
2	Time & Work, Syllogisms						
3	Critical Reasoning						
4	Mensuration, Cubes & Dices						
5	Para Jumble, Permutations & Combinations						
6	Blood Relations & Direction Sense, Manners & Etiquette						
7	Idiom & Phrases, Prefix-Suffix						
8	Probability. Puzzles						
9	Data Sufficiency, Logical Choices & Connectives						
10	Date Interpretations, Deductions						
11	Essay Writing, E-mail Writing						
12	Personal Grooming						

Code:MCACCA2401

Industrial Training Seminar - I

1 Credit [LTP: 0-0-2]

OBJECTIVE: To expose engineering students to technology development at workplaces and appraise them regarding shop-floor problems. To provide practical experience in solving open ended problems in real work setting so as to cause transfer of college based knowledge and skills to solve practical problems and thereby develop confidence in the students in the analysis, synthesis and evaluation of practical problems leading to creative thinking.

At the end of the second semester each student would undergo Industrial Training in an industry/ Professional organization / Research Laboratory with the prior approval of the Head of Department and Training & Placement Officer, and shall be required to submit a written typed report along with a certificate from the organization and present a PPT based on the training.

This period shall include orientation and preparation for the said Training incorporated in the curriculum after second semester.

The report of the Training shall be evaluated during III Semester by a Board of Examiners to be appointed by the Faculty Coordinator-Training Seminar who will award the grades.

Theory

Code: MCACCA3101

Operating System

3 Credits [LTP: 3-0-0]

COURSE OUTCOME:

Students will be able to:

- Describe the structure and organization of the file system.
- Demonstrate a process synchronization and Scheduling.
- Determine different approaches to memory management.
- Use system calls for managing processes, memory and the file system.
- Define the data structures and algorithms used to implement an OS.

Practical

Code: MCACCA3201	Operating System Lab	1 Credit [LTP: 0-0-2]

COURSE OUTCOME

Students will be able to:

Implement basic services and functionalities of the operating system using system calls. Use modern operating system calls and synchronization libraries in software/ hardware interfaces. Know the benefits of thread over process and implement synchronized programs using multi-threading concepts. Analyze and simulate CPU Scheduling Algorithms like FCFS, Round Robin, SJF, and Priority. Implement memory management schemes and page replacement schemes.

A. LIST OF EXPERIMENTS:

1	Write a Conserver to simplete the following our mean time CDU asheduling allowithms to find		
1	write a C program to simulate the following non-preemptive CPU scheduling algorithms to find		
	turnaround time and waiting time. a) FCFS b) SJF c) Round Robin d) Priority		
2	Write a C program to simulate the following file allocation strategies. a) Sequential b) Indexed c) Linked		
3	Write a C program to simulate multi-level queue scheduling algorithm considering the following scenario.		
Ũ	All the processes in the system are divided into two categories, system processes and year processes		
	An the processes in the system are divided into two categories – system processes and user processes.		
	System processes are to be given ingher priority than user processes. Use FCFS scheduling for the		
	processes in each queue		
4	Write a C program to simulate the MVT and MFT memory management techniques.		
5	Write a C program to simulate the following contiguous memory allocation techniques a) Worst-fit b) Best-		
	fit c) First-fit		
6	Write a C program to simulate paging technique of memory management		
7	Write a C program to simulate Bankers algorithm for the purpose of deadlock avoidance.		
8	Write a C program to simulate disk scheduling algorithms a) FCFS b) SCAN c) C-SCAN		
9	Write a C program to simulate page replacement algorithms a) FIFO b) LRU c) LFU		
10	Write a C program to simulate page replacement algorithms		
11	Write a C program to simulate producer-consumer problem using semaphores.		
12	Write a C program to simulate the concept of Dining-Philosophers problem.

1 Credit [LTP: 0-0-2]

Course Outcome:-

1

Students will be able to:

- Use the clamping tool for making Cross and Straight cable and identify network IP
- Create local area network and do file sharing activity
- Configure switch and routers
- Configure WEP and Ethernet.
- Recognize static and dynamic routing.

A. LIST OF EXPERIMENTS:

Implementation of TCP/IP protocol – I

Minor Stream Courses Theory

Code: MCDCCA3101

NLP and Computer Vision

3Credits [LTP: 3-0-0]

COURSE OUTCOME

Students will be able to:

PU/Batch 2023-25/FCE/Syllabus/MCA AI &DS

Page **86** of **101**

- Demonstrate the significance of natural language processing and solve the real-world problems
- Examine semantics and pragmatics of English language for text processing
- Perform POS tagging for a given natural language and Select a suitable language modelling technique based on the structure of the language.
- Implement basic knowledge, theories and methods in image processing and computer vision.
- Identify, formulate and solve problems in image processing and computer vision.

A. OUTLINE OF THE COURSE

Unit No.	Title of The Unit	Time required for the Unit (Hours)
1.	Introduction to NLP	06
2.	Language Modelling: N-gram and POS Tagging	09
3.	Syntactic and Semantic Parsing	09
4.	Introduction to Computer Vision	07
5.	Deep Learning and computer Vision	09

B. DETAILED SYLLABUS

• What is NLP? Why NLP is Difficult?			
• Phases of NLP			
• Why NLP is Difficult?			
NLP APIs			
NLP Libraries			
_			

	Parts-of-speech Tagging				
	• Rule based POS Tagging				
	TBL POS Tagging				
	POS tagging using HMM				
	• Conclusion of Unit				
3.	Syntactic and Semantic Parsing				
	• Introduction to Unit				
	• Basic concepts: top down and bottom up parsing				
	• Treebank;				
	• Syntactic parsing: CKY parsing;				
	• Statistical Parsing basics: Probabilistic Context Free Grammar (PCFG); Probabilistic CKY Parsing of				
	PCFGs.				
	• Vector Semantics; Words and Vector;				
	• Measuring Similarity; Semantics with dense vectors;				
	• SVD and Latent Semantic Analysis;				
	• Embedding from prediction: Skip-gram and CBOW				
	• Introduction to Word Net				
	Conclusion of Unit				
4.	Introduction to Computer Vision				
	Introduction of Unit				
	Cameras and optics				
	• Pixels and image filters				
	• Image Formation				
	• Image pyramids and applications				
	Computer vision VS Image				
	Conclusion of Unit				
5	Deen Learning and computer Vision				
	Introduction to Unit				
	• Deep Learning basics for computer Vision				
	• Image Classification				
	• Applications of Image Classification				
	Object Detection				
	• Type of Object Detection				
	Applications of Object Detection				
	Semantic Segmentation				
	Applications of Semantic Image Segmentation				
	• Face detection and tracking				
	Conclusion of Unit

Deep Learning and ANN

COURSE OUTCOME

Students should be able to:

- Memorize the concepts of Artificial Neural Network
- Describe the basics concepts of deep learning.
- Emphasize the knowledge on various deep learning algorithms.
- Implement the concept of CNN and RNN to model for real world applications.
- Acknowledge the various challenges involved in designing deep learning algorithms for varied applications

Unit No.	Title of The Unit	Time required for the Unit (Hours)
1.	Introduction to Artificial Neural Network	07
2.	Introduction to Deep Learning	08
3.	Convolutional Neural Networks	09
4.	Recurrent Neural Networks	07
5.	Deep Generative Models and Applications	09

Cloud Computing

3Credits [LTP: 3-0-0]

COURSE OUTCOME

Students will be able to:

- Describe the main concepts, key technologies, strengths, and limitations of cloud
- Demonstrate the architecture and infrastructure of cloud computing and various service models.
- Define the concept and application of virtualization
- Analyze the concept of service management in cloud computing
- Examine security and privacy issues in cloud computing
- A. OUTLINE OF THE COURSE

Unit No.	Title of the unit	Time required for the Unit (Hours)
1.	Introduction to Cloud Technologies	08
2.	Cloud Computing Architecture and Service Models	08
3.	Virtualization	06
4.	Service Management in Cloud Computing	06
5.	Cloud Security	06

B. DETAILED SYLLABUS

Unit	Unit Details				
1.	Introduction to Cloud Technologies				
	Overview of computing paradigm: Recent trends in Computing - Grid Computing, Cluster Computing,				
	Distributed Computing, Utility Computing, Cloud Computing. History of Cloud Computing, Evolution of				
	cloud computing - Business driver for adopting cloud computing, Cloud service providers. Properties,				
	Characteristics & Disadvantages - Pros and Cons of Cloud Computing, Benefits of Cloud Computing, Cloud				
	computing vs. Cluster computing vs. Grid computing.				
2.	Cloud Computing Architecture				
	Cloud Computing Architecture: Cloud computing stack - Comparison with traditional computing architecture				
	(client/server), Services provided at various levels, How Cloud Computing Works, Role of Networks in				
	Cloud computing, protocols used, Role of Web services. Service Models (XaaS) - Infrastructure as a Service				
	(IaaS), Platform as a Service (PaaS), Software as a Service (SaaS). Deployment Models, Public cloud,				
	Private cloud, Hybrid cloud, Community cloud				

3.	Virtualization					
	Introduction to virtualization, Different approaches to virtualization, Hypervisors, Machine Image, Virtual					
	Machine (VM). Resource Virtualization - Server, Storage, Network. Virtual Machine (resource) provisioning					
	Compute Unit, Platform and Storage, pricing, customers, Service Oriented Architecture (SOA), Cloud					
	Platform and Management – computation Web services, Web 2.0, Web OS					
4.	Service Management in Cloud Computing					
	Service Management in Cloud Computing: Service Level Agreements(SLAs), Billing & Accounting,					
	Comparing Scaling Hardware: Traditional vs. Cloud, Economics of scaling: Benefitting enormously, Managing Data - Looking at Data, Scalability & Cloud Services, Database & Data Stores in Cloud, Large Scale Data Processing					
5.	Cloud Security					
	Cloud Security: Infrastructure Security - Network level security, Host level security, Application level					
	security. Data security and Storage - Data privacy and security Issues, Jurisdictional issues raised by Data					
	location: Identity & Access Management, Access Control, Trust, Reputation, Risk, Authentication in cloud					
	computing, Client access in cloud, Cloud contracting Model, Commercial and business considerations

Minor Stream Courses Practical

Code: MCDCCA3201

NLP and Computer Vision Lab

1Credit [LTP: 0-0-2]

Course Outcome:-

Students will be able to:

- Develop systems for various NLP problems with moderate complexity.
- Familiarize various NLP software libraries and data sets publicly available.
- Implement semantics and pragmatics of English language for text processing
- Implement real time applications of computer vision.
- Design and develop practical and innovative image processing and computer vision applications or systems.

A. LIST OF EXPERIMENTS:

1	Write a program to tokenize the sentence into words for the further analysis (using Python Function)
2	Write a program to Normalize the sentence to eliminate the unwanted punctuation, converting into lower case or upper case of the entire document, expanding abbreviation, numbers into words and canonicalization
3	Write a program that splits the following string "Hello there SAM" into list and iterate over th list using 3 different methods
	• List as a Iterable
	Using Range
4	Convert the following sentence into tokens "NLP is Fun, you must learn it " into lowercase
	• Without splitting
	• With splitting
5	Write a program for Amazon review dataset to find the maximum number of words used. Get the output
	for the frequently occurred word in the given data? And also visualize the test data .
6	Write a program to Get the word cloud for the yelp Review data set
7	Perform the sentiment analysis, classifying comments using various machine learning model on IMDB review data set
8	Write a program to perform n-gram analysis on Amazon review data set and also compare result while performing different type of n-gram analysis on the given dataset
9	Write a program to display grayscale images using python

PU/Batch 2023-25/FCE/Syllabus/MCA AI &DS

Page **95** of **101**

10	Write a python program to detect the edges of image
11	Write a python program to create a vision program to find histogram value and display histograph of a grayscale and color image.
12	Write a python program to create a program to eliminate the high frequency components of an image.

B. RECOMMENDED STUDY MATERIAL

S. No	Text Books:	Author	Edition	Publication

Code: MCDCCA3202

Deep Learning and ANN Lab

1Credit [LTP: 0-0-2]

Course Outcome:-

Students will be able:

- Implement the various deep learning algorithms in Python.
- Apply different deep learning frameworks like Keras, Tensor flow and PyTorch, Caffe
- Design hyper parameters of CNN for achieving the desired outcomes.
- Design the test procedures to assess the efficacy of the developed model.
- Implement a real world application based object detection model by using CNN.

A.

LIST OF EXPERIMENTS:

1	Implement a python program to recognize characters.
2	Use MNIST dataset for the same. Implement SVM / Softmax classifier for CIFAR-10 dataset: (i) using
	KNN, (1) using 3 layer neural network
3	Implement the concept of transfer learning to classify an image dataset by using pre trained model.
4	Study the effect of batch normalization and dropout in neural network classifier.
5	Improve the Deep learning model by tuning hyper parameters.
6	Implement the CNN based image segmentation using on the online available dataset by using :
7	• Mask RCNN,
8	• UNet,
	• SegNet
9	Object detection with single-stage and two-stage detectors by using:
10	• Yolo,
	• FRCNN
11	Image Captioning with LSTMs
12	Image generation using GAN.

B.

Ability Enhancement Courses (AEC)

Code: MULCHU3201

Spoken English & Communication Skills II

1Credit [LTP: 0-0-2]

COURSE OUTCOMES

Students would be able to:

- Demonstrate depth of understanding, observing complexity, improve insight and develop independent thought and persuasiveness.
- **Determine** the main ideas of the text by using key details and compare & contrast the most important points with the help of their perspective.
- Practice the qualities of writing style by applying the concepts of sentence conciseness, accuracy, readability, coherence and by avoiding wordiness or ambiguity.
- Distinguish words and phrases as per their intonation patterns and interpret the audios based on different situations
- Demonstrate the understanding of impactful conversational skills, presentation skills & telephonic conversation by considering the need of the audience

Unit No.	Title of the Unit	Time required for the Unit (Hours)
1	Advanced Listening & Speaking Skills	12
2	Advanced Reading & Writing Skills	6
3	Art of Negotiation Skills	2
4	Email Etiquettes	2
5	Group Discussion	2

LIST OF LABS		
1	Listening Skills II: Analysis of videos/audios by famous personalities	
2	Speaking Skills II: Extempore, Debate etc.	
3	Public Speaking: Key Concepts, Overcoming Stage Fear	
4	Story-Telling Skills: Techniques of Story Telling, Prompts for story creation	
5	Situational Conversational Skills	
6	PowerPoint Presentation Skills-II	
7	Reading Skills II: Technical Writings, Research Papers& Articles	
8	Writing Skills II: Blog Writing & Review Writing	
9	Picture Perception & Discussion	
10	Art of Negotiation: Identify the qualities of successful and unsuccessful negotiators. Identify different negotiation	
	situations to practice during class.	
11	Email Etiquettes	
12	Group Discussion: Dos &Don'ts, Informal GD	

Code: MULCSE3201 Skill Enhancement Generic Course –III

1Credit [LTP: 0-0-2]

COURSEOUTCOMES: On completion of the course a student will be able to:

- Understand basic problems based on arithmetic and soft skills area which are asked in aptitude test taken by companies
- Effectively solve these problems by applying the knowledge earned.
- Actively participate in group discussion / meetings / interviews and prepare & deliver presentations.
- Become more effective individual through goal/target setting, self-motivation and practicing creative thinking.
- Function effectively in multi-disciplinary and heterogeneous teams through the knowledge of team work, Inter-personal relationships, conflict management and leadership quality

LIST OF ACTIVITIES

1	Objective Building, Parts of speech, Nouns, Numbers & Genders, Importance of soft skills
2	Logarithms, Number Theory
3	Tenses
4	Number system- Fractions & Decimals
5	Stress Management Techniques, Critical Thinking
6	Modal Verbs & Conditional Tense, Working under pressure
7	Boosting brain power for fast learning & unlearning
8	Pronouns, Adverbs & Adjectives
9	Emotional Intelligence, 5 levels of listening
10	Remainder Theoram
11	Points, lines & angles
12	Article Writing

SEMESTER-IV

Code: MULCSE4201

Skill Enhancement Generic Course- IV 1Cred

COURSEOUTCOMES: On completion of the course a student will be able to:

- Understand basic problems based on arithmetic and soft skills area which are asked in aptitude test taken by companies
- Effectively solve these problems by applying the knowledge earned.
- Actively participate in group discussion / meetings / interviews and prepare & deliver presentations.
- Become more effective individual through goal/target setting, self-motivation and practicing creative thinking.
- Function effectively in multi-disciplinary and heterogeneous teams through the knowledge of team work, Inter-personal relationships, conflict management and leadership quality

LIST OF ACTIVITIES		
1	Averages, Mean, Median and Mode	
2	Cognitive learning theory, Body Language basics	
3	Heights & Distances	
4	Sitting Arrangements	
5	Fill Ups(Grammar based)	
6	Error Detection, Confusing words	
7	Alphanumeric Series	
8	Verbal Analogy, One word substitution	
9	Dices	
10	Sentence Correction, Subject-Verb agreement	
11	Statement & Assumptions, Setting SMART goals,	
12	Persuasion Skills, Interview Preparation
