Your Dreams Our Goal
POORNIMA
UNIVERSITY

Member of Association of Indian Universities & Approved by UGC (Govt. of India) under 2(f) & 12(B)

VISION

To create knowledge based society with scientific temper, team spirit and dignity of labor to face global competitive challenges.

Mission

To evolve and develop skill based systems for effective delivery of knowledge so as to equip young professionals with dedication and commitment to excellence in all spheres of life.

Quality Policy

To provide Quality Education through Faculty development, updating of facilities and continual improvement meeting University norms and keeping stake holders satisfied.

Knowledge Wheel

At Poornima, the academic atmosphere is a rare blend of modern technical as well as soft skills and traditional systems of learning processes.

About Program and Program Outcomes (PO):

Title of the Programme: Masters of Computer Applications (MCA)

Nature of the Programme: MCA is a two year full-time programme.

Program Outcomes (PO) :

Post Graduates will be able to:

PO1: Computational Knowledge: Apply knowledge of computing fundamentals, computing specialisation, mathematics, and domain knowledge appropriate for the computing specialisation to the abstraction and conceptualisation of computing models from defined problems and requirements.

PO 2: Problem Analysis: Identify, formulate, research literature, and solve complex computing problems reaching substantiated conclusions using fundamental principles of mathematics, computing sciences, and relevant domain disciplines.

PO 3: Design /Development of Solutions: Design and evaluate solutions for complex computing problems, and design and evaluate systems, components, or processes that meet specified needs with appropriate consideration for public health and safety, cultural, societal, and environmental considerations.

PO 4: Conduct investigations of complex Computing problems: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.

PO 5: Modern Tool Usage: Create, select, adapt and apply appropriate techniques, resources, and modern computing tools to complex computing activities, with an understanding of the limitations.

PO 6: Professional Ethics: Understand and commit to professional ethics and cyber regulations, responsibilities, and norms of professional computing practices.

PO 7: Life-long Learning: Recognise the need, and have the ability, to engage in independent learning for continual development as a computing professional.

PO8: Project management and finance: Demonstrate knowledge and understanding of the computing and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.

PO 9: Communication Efficacy: Communicate effectively with the computing community, and with society at large, about complex computing activities by being able to comprehend and write effective reports, design documentation, make effective presentations, and give and understand clear instructions.

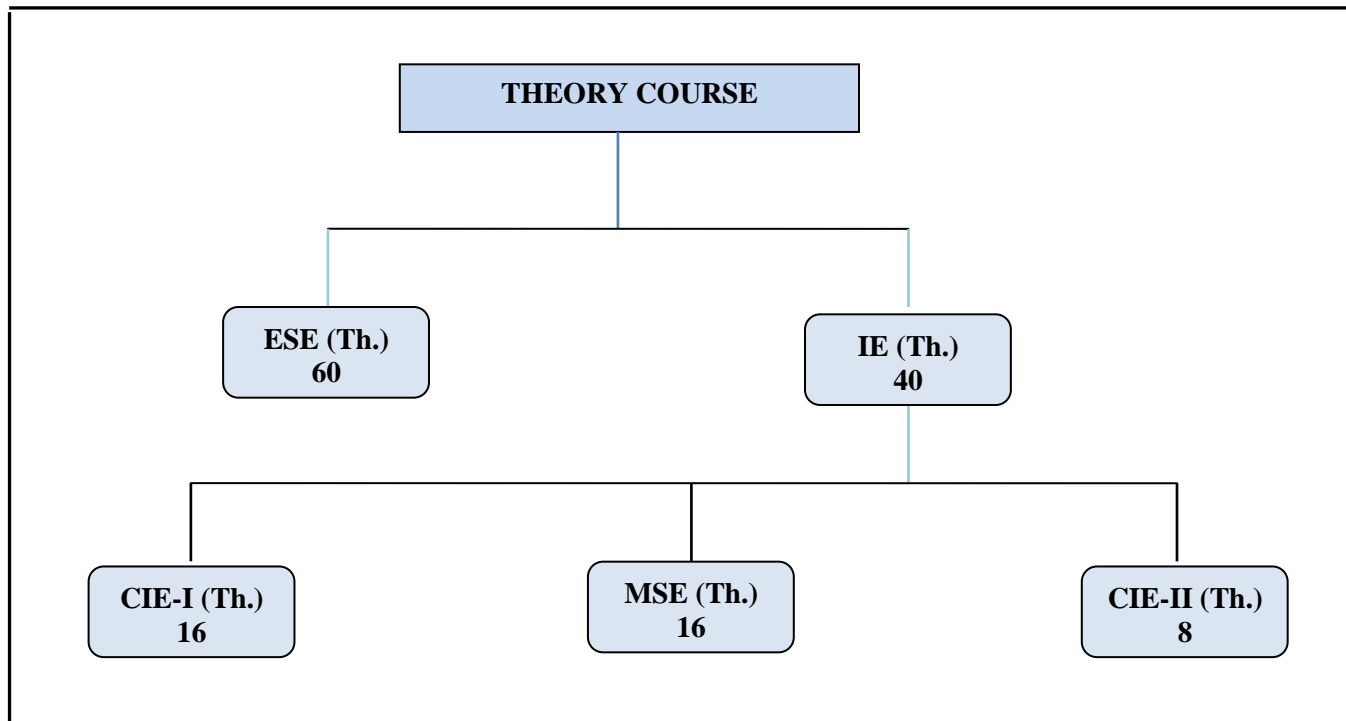

PO 10: Societal and Environmental Concern: Understand and assess societal, environmental, health, safety, legal, and cultural issues within local and global contexts, and the consequential responsibilities relevant to professional computing practices.

PO11: Individual and Team Work: Function effectively as an individual and as a member or leader in diverse teams and in multidisciplinary environments.

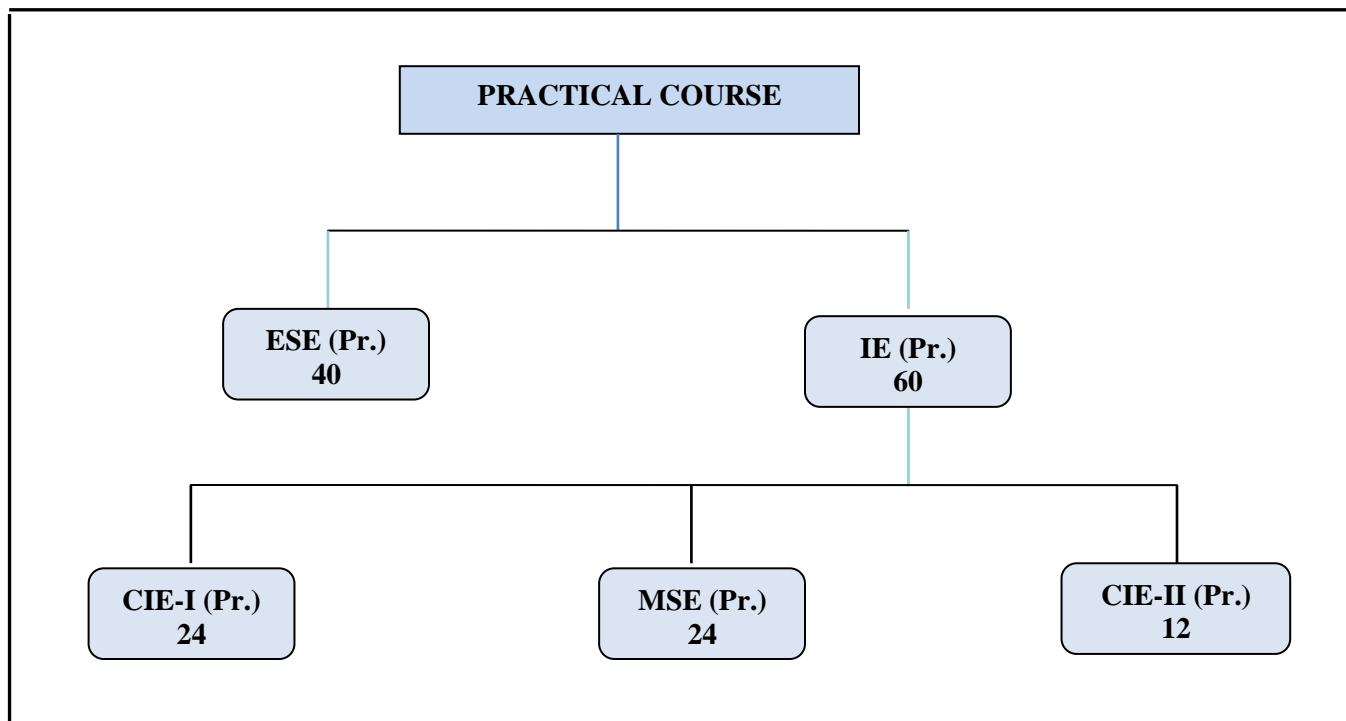

PO 12: Innovation and Entrepreneurship: Identify a timely opportunity and using innovation to pursue that opportunity to create value and wealth for the betterment of the individual and society at large.

Examination System :

A. Marks Distribution of Theory Course:

B. Marks Distribution of Practical Course :

Th.: Theory, **Pr.:** Practical, **ESE:** End Semester Examination, **MSE:** Mid Semester Examination, **CIE:** Continuous Internal Evaluation.

CO Wise Marks Distribution:

<u>Exam Entity</u>	Theory Subject		Practical/ Studio Subject	
	Maximum Marks	CO to be Covered	CO to be Covered	Maximum Marks
CIE-I	16 (8 + 8)	1 & 2	1 & 2	24 (12 + 12)
MSE	16(8 + 8)	3 & 4	3 & 4	24 (12 + 12)
CIE-II (Activity/ Assignment)	8 (8)	5	5	12 (12)
ESE	60	-	-	40
TOTAL	100	-	-	100

Minimum Passing Percentage in All Exams:

S No.	Program Name	Minimum Passing Percentage in		
		IE Component	ESE Component	Total Component
1	Course Work for PhD Registration	-	-	50%
2	B. Arch.	-	45%	50%
3	MBA, MCA, M.Des., M.Tech., M.Plan, MHA, MPH	-	40%	40%
4	MBA, MCA, M.Des., M.Tech., M.Plan, MHA, MPH	-	35%	35%

SGPA Calculation

$$SGPA = \frac{C_1G_1 + C_2G_2 + \dots + C_nG_n}{C_1 + C_2 + \dots + C_n}$$

$$SGPA = \frac{\sum_i C_i \times G_i}{\sum_i C_i}$$

where (as per teaching scheme & syllabus):

C_i is the number of credits of subject i ,

G_i is the Grade Point for the subject i and $i = 1$ to n ,

n = number of subjects in a course in the semester

CGPA Calculation

$$CGPA = \frac{C_1G_1 + C_2G_2 + \dots + C_nG_n}{C_1 + C_2 + \dots + C_n}$$

$$CGPA = \frac{\sum_i C_i \times G_i}{\sum_i C_i}$$

where (as per teaching scheme & syllabus):

C_i is the number of credits of subject i ,

G_i is the Grade Point for the subject i and $i = 1$ to n ,

n = number of subjects in a course of all the semesters up to which CGPA is computed

Grading Table:

Applicable for B.Arch. & Ph.D. Courses				Applicable for All Courses except B.Arch. & Ph.D.			
Academic Performance	Grade	Grade Point	Marks Range (in %)	Academic Performance	Grade	Grade Point	Marks Range (in %)
Outstanding	O	10	$90 \leq x \leq 100$	Outstanding	O	10	$90 \leq x \leq 100$
Excellent	A+	9	$80 \leq x < 90$	Excellent	A+	9	$80 \leq x < 90$
Very Good	A	8	$70 \leq x < 80$	Very Good	A	8	$70 \leq x < 80$
Good	B+	7	$60 \leq x < 70$	Good	B+	7	$60 \leq x < 70$
Above Average	B	6	$50 \leq x < 60$	Above Average	B	6	$50 \leq x < 60$
Fail	F	0	$x < 50$	Average	C	5	$40 \leq x < 50$
Absent	Ab	0	Absent	Pass	P	4	$35 \leq x < 40$
				Fail	F	0	$x < 35$
				Absent	Ab	0	Absent

CGPA to percentage conversion rule:

$$\text{Equivalent \% of Marks in the Program} = \text{CGPA} * 10$$

Award of Class

CGPA	Percentage	Equivalent Division
$7.50 \leq \text{CGPA}$	75% or more	First Division with Distinction
$6.00 \leq \text{CGPA} < 7.50$	$60\% \leq x < 75\%$	First Division
$5.00 \leq \text{CGPA} < 6.00$	$50\% \leq x < 60\%$	Second Division
$4.00 \leq \text{CGPA} < 5.00$	$40\% \leq x < 50\%$	Pass Class

Guidelines for Massive Open Online Courses (MOOCs)

(Session 2023-24)

Poornima University, in its never ending endeavor to equip students with best-of-class learning and knowledge, has undertaken to include MOOC courses as part of its credit scheme from session 2023-24 onwards. The objective behind this is to enable students to study courses designed by the best teachers in the country and to scale their knowledge base with the rest of learners from the nation. The MOOCs which are included under this scheme is can be chosen from SWAYAM and NPTEL.

1. Introduction of MOOCs: SWAYAM and NPTEL

About SWAYAM:

SWAYAM is a programme initiated by Government of India and designed to achieve the three cardinal principles of Education Policy viz., access, equity and quality. The objective of this effort is to take the best teaching learning resources to all, including the most disadvantaged. SWAYAM seeks to bridge the digital divide for students who have hitherto remained untouched by the digital revolution and have not been able to join the mainstream of the knowledge economy.

This is done through a platform that facilitates hosting of all the courses, taught in classrooms to be accessed by anyone, anywhere at any time. All the courses are interactive, prepared by the best teachers in the country and are available, free of cost to any learner. However learners wanting a SWAYAM certificate should register for the final proctored exams that come at a fee and attend in-person at designated centers on specified dates. Eligibility for the certificate will be announced on the course page and learners will get certificates only if this criteria is matched.

The courses hosted on SWAYAM are in 4 quadrants – (1) video lecture, (2) specially prepared reading material that can be downloaded/printed (3) self-assessment tests through tests and quizzes and (4) an online discussion forum for clearing the doubts. Steps have been taken to enrich the learning experience by using audio-video and multi-media and state of the art pedagogy / technology.

In order to ensure that best quality content is produced and delivered, nine National Coordinators have been appointed. They are:

1. AICTE (All India Council for Technical Education) for self-paced and international courses
2. NPTEL (National Programme on Technology Enhanced Learning) for Engineering
3. UGC (University Grants Commission) for non-technical post-graduation education
4. CEC (Consortium for Educational Communication) for under-graduate education
5. NCERT (National Council of Educational Research and Training) for school education
6. NIOS (National Institute of Open Schooling) for school education
7. IGNOU (Indira Gandhi National Open University) for out-of-school students
8. IIMB (Indian Institute of Management, Bangalore) for management studies
9. NITTR (National Institute of Technical Teachers Training and Research) for Teacher Training programme

Two types of courses are offered on SWAYAM platform: Credit Courses and Non- Credit Courses. Credit courses are offered for each semester in January and July every year. The list is available on SWAYAM official website: <https://onlinecourses.swayam2.ac.in/>

About NPTEL:

NPTEL (National Programme on Technology Enhanced Learning), is a joint venture of the IITs and IISc, funded by the Ministry of Education (MoE) Government of India, and was launched in 2003. Initially started as a project to take quality education to all corners of the country, NPTEL now offers close to 600+ courses for certification every semester in about 22 disciplines.

Some highlights:

- Largest online repository in the world of courses in engineering, basic sciences and selected humanities and management subjects
- YouTube channel for NPTEL – most subscribed educational channel, 1.3 billion views and 40+ lakhs subscribers
- More than 56000 hours of video content, transcribed and subtitled
- Most accessed library of peer-reviewed educational content in the world
- Translation of more than 12000 hrs of English transcripts in regional Indian languages

NPTEL Online Certification:

The objective of enabling students obtain certificates for courses is to make students employable in the industry or pursue a suitable higher education programme. Through an online portal, 4, 8, or 12-week online courses, typically on topics relevant to students in all years of higher education along with basic core courses in sciences and humanities with exposure to relevant tools and technologies, are being offered. Enrolment to and learning from these courses is free. Following these online courses, an in-person, proctored certification exam is conducted and a certificate is provided through the participating institutions and industry, as applicable.

Some statistics regarding the open online courses since March 2014 till Dec 2021

Completed courses: 3496;

Enrollments across courses: 1.58 CRORE +

Number of exam registrations: 15.1 LAKH +

All the statistics pertaining to completed courses are available at <https://beta.nptel.ac.in/courses>. All courses are completely free to enroll and learn from. The certification exam is optional and comes at a fee of Rs 1000/course exam.

2. MOOCs at Poornima University:

MOOCs envelops best in class teaching - learning processes along with meeting the requirements of various courses in terms of quality of teaching and evaluation system. To promote the MOOCs among students of Poornima University, it is decided to consider the credits earned through MOOCs.

(a) Options for MOOCs at Poornima University

(For this document, only those MOOCs will be considered which are available on SWAYAM & NPTEL platforms)

- Credit and Non-credit SWAYAM MOOCs can be opted by anyone, anytime, anywhere and in any language. However, prior-permission of the University Authorities is mandatory if the credits are to be transferred to regular degree.
- In case of credit courses, there are two ways to opt these courses for the purpose of credit transfer to PU system as given below:

OPTION–I: As Open Elective (for batches entered till 2022) / Multidisciplinary Courses (for batches admitted from 2023-24 onwards):

Open Elective (for batches entered till 2022) / Multidisciplinary Courses (for batches admitted from 2023-24 onwards) are available at University level in offline mode for which relevant booklets are already published. **These courses carries 02 credits.** These category/type of courses (similar/different) are also available as MOOC courses. The respective Deans / HODs shall provide both the options to all the students to either select offline courses or MOOCs as per details given below:

- Deans / HODs shall prepare a list of upto 05 appropriate MOOC courses of 02/03 credits each, well in advance (at-least 15 days prior to commencement of semester) and take approval from the Office of Dean, Academics / Pro-President, PU.

- After approval, the respective Deans / HODs shall circulate a notice to all their respective students so that they can select any one course from the list, the credits (**only 02**) of which will be counted against Open Elective/ Multidisciplinary courses pertaining to that particular semester.
- If the students are not willing to opt for MOOC Open Elective/ Multidisciplinary course, they can proceed with the current offline practice of opting for Multidisciplinary courses.
- The tutor of the class shall monitor the progress (assignments, feedback, any problem etc.) on weekly basis and report to Head/Dean.

OR

OPTION-II: As Major / Minor Courses:

- Deans / HODs shall identify a course of **03 credits** for each semester, well in advance (at-least 15 days prior to commencement of semester) and take approval from the Office of Dean, Academics / Pro-President, PU.
- After approval, the respective Deans / HODs shall circulate a notice to all their respective students citing that the particular course will be conducted through MOOCs only and is compulsory for all respective students. The credits of this course will be counted against Major/Minor courses pertaining to that particular semester.
- The tutor of the class shall monitor the progress (assignments, feedback, any problem etc.) on weekly basis and report to Head/Dean.
- This is to be noted that if Deans / HODs decide to conduct any major/minor course in any semester through MOOCs, no offline course will be conducted against that.

(b) Important points related to MOOCs at Poornima University

- Only one MOOC shall be allowed in a particular semester for the purpose of credit transfer in the beginning.
- No attendance will be taken for MOOC courses.
- Last period of T/T/S shall be taken for MOOC courses which shall be in self-study mode.
- The method of assessments of MOOC such as assignments and examination are completely associated with that particular MOOC and no exam will be conducted by the department as well as by the Examination Cell.
- The respective Dean / HOD must submit the detail of course i.e., code, name and credit of MOOC opted against that particular course in particular semester attached with highlighting in the related examination scheme of syllabus of that semester signed by BOS Convener / HoD and Dean of Faculty to the office of Pro-President before commencement of the classes.
- SWAYAM will award a certificate to all the students passing the examination along with the credit earned. The center of examination for SWAYAM MOOCs will be finalized by SWAYAM. All the responsibility related to registration for MOOCs, timely submission of assignments, examinations etc. will be borne by the students only.
- The list of registered students in MOOC along with name of course will be submitted to the Examination Cell by the Deans / HoDs before commencement of the classes.
- Any student who would not be able to register/present/clear/pass the MOOC in the stipulated time, it is the choice of the student that he or she may register in next semester (odd or even) with MOOC again or appear as a back exam candidate of the University as per PU norms.
- There will be no provision of re-evaluation of MOOC.
- The scorecard and related certificate of MOOC along with a consolidated list of students with marks of assignment and final exam will be submitted to the examination cell by the concerned Dean / HOD for further process. It is also recommended that alteration/changes/scaling in marks obtained by the students in any MOOC will not be considered.
- The exam registration fee of MOOC up to Max. INR 1000/- will be reimbursed to the student only after successful PU/Batch 2023-25/FCE/Syllabus/MCA Cyber Security

completion of the course in first attempt and submission of the fee receipt, score-card and certificate of the MOOC to the concerned department within stipulated time after declaration of the results.

NOTE: This is to be noted that the procedure for getting approval from BOS, Faculty Board, Academic Council and BoM is to be followed as per regular process.

Semester-I

Major (Core Courses) Theory

Code: MCACSA1101

Foundation of Mathematics

3 Credits [LTP: 3-0-0]

COURSE OUTCOME:

The student would be able to:

- Describe the basic concept of matrices and their various properties
- Obtain the solution of Eigen value and Eigen vectors and inverse of matrix using Cayley Hamilton theorem.
- Obtain important features of vector, Del operator and its various forms in gradient, divergence and curl.
- Solve the order and degree of differential equations and their solutions
- Analyze of complex number and their properties

A. OUTLINE OF THE COURSE

Unit No.	Title of the unit	Time required for the Unit (Hours)
1.	Matrix Theory	08
2.	Eigen Values	07
3.	Vector calculus	08
4.	Differential Equation	08
5.	Complex Algebra	07

B. DETAILED SYLLABUS

Unit	Unit Details
1.	Matrix Theory
	<ul style="list-style-type: none"> • Introduction of Unit • Introduction to the matrix theory • Types of matrices, • Inverse of matrices, • Rank of matrices, • Solving system of linear equations. • Conclusion of Unit
2.	Eigen Values
	<ul style="list-style-type: none"> • Introduction of Unit • Eigen values and Eigen vectors, • Cayley-Hamilton Theorem (without proof) with application , • Diagonalization of matrices. • Conclusion of Unit
3.	Vector calculus
	<ul style="list-style-type: none"> • Introduction of Unit • Scalar and Vector quantity • Derivative of a vector function, Velocity and accelerations • Basic concepts of vectors, gradient, divergence and curl of a vector. • Conclusion of Unit
4.	Differential Equation
	<ul style="list-style-type: none"> • Introduction of Unit • Basic idea of differential equations • Degree and order of Differential equation

	<ul style="list-style-type: none"> • Variable separation, Homogeneous, • Linear equations and equations reducible to linear form • Exact Differential equation • Conclusion of Unit
5. Complex Algebra	
	<ul style="list-style-type: none"> • Introduction of Unit • Introduction to the complex algebra, complex numbers, • Geometrical representation of complex numbers, • Argand diagram, • De- Moirvre's theorem • Conclusion of Unit

Note: On the basis of mapping of COs with POs, this course is related to Employability/Skill Development

COURSE OUTCOME

Students will be able to:

- Illustrate the concept of data types, loops, functions, array, pointers, string, structures and files.
- Analyze the conditional and iterative statements to write C programs.
- Develop user defined functions to solve real life problems.
- Design C programs using pointers and to allocate memory using dynamic memory management functions.
- Apply programming concepts to compile and debug c programs to find solutions.

A. OUTLINE OF THE COURSE

Unit No.	Title of The Unit	Time required for the Unit (Hours)
1.	Introduction to CProgramming	7
2.	Decision Making & Looping	7
3.	Array, String and Functions	8
4.	Advance programminginC	8
5.	File handling & Additionalfeatures	8

B.

AILED SYLLABUS

Unit	Unit Details
1.	Introduction to CProgramming
	<ul style="list-style-type: none"> • Introduction of Unit • Introduction to computer-based problem solving, Program design and implementation issues- Flowcharts & Algorithms, Top-down design & stepwise refinement • Programming environment – Machine language, assembly language, high level languages, Assemblers,Compilers, and Interpreters. • Overview of C, Data Types, Constants & Variables, Literals, Operators & Expressions • Conclusion of Unit
2.	Decision Making & Looping
	<ul style="list-style-type: none"> • Introduction of Unit • Decision making in C- if statement, if-else statement, Nested if statement, if else if Ladder, Switch case • Loop control in C – for loop, while loop, do-while loop • Control flow in C- break, continue and goto statement.

	<ul style="list-style-type: none"> • Conclusion of Unit
3.	Array, String and Functions
	<ul style="list-style-type: none"> • Introduction of Unit • Array- 1D array, 2D array and dynamic array • Scope rules- Local & global variables, scope rules of functions • Functions-parameter passing, call by value and call by reference, calling functions with arrays, command line argument, recursion- basic concepts. • String – String in build function • Conclusion of the Unit
4.	Advance programming in C
	<ul style="list-style-type: none"> • Introduction of Unit • Pointers- pointer expression, assignments, arithmetic, comparison, arrays of pointers, pointers to pointers, initializing pointers, pointers to functions, function returning pointers. • Structures- Basics, declaring, referencing structure elements, array of structures, passing structures to functions, structure pointers, arrays and structures within structures, typedef. • Unions – Declaration, uses • Enumerated data-types • Conclusion of the Unit
5.	File handling & Additional features
	<ul style="list-style-type: none"> • Introduction of Unit • File Handling – The file pointer, file accessing functions-fopen, fclose, putc, getc, fprintf, reading and writing into a file • Advance features- storage classes and dynamic memory allocation • C Preprocessor- #define, #include, #undef, Conditional compilation directives. • C standard library and header files: Header files, string functions, mathematical functions, Date and Time functions. • Conclusion of the Unit

CO4	-	-	2	2	1	-	-	-	-	-	-	-	-	-	-
CO5	-	2	-	1	-	-	-	-	-	-	-	-	-	-	-

Note: On the basis of mapping of COs with POs, this course is related to Employability/Skill Development

COURSE OUTCOME

The student would be able:

- State various types of data structures and their uses according complexity.
- Illustrate the concept of searching and sorting techniques and apply on data.
- Analyze and design stack and queue data structure
- Design tree data structure for real life applications
- Design linked list and graph data structure for real life applications

A. OUTLINE OF THE COURSE

Unit No.	Title of the unit	Time required for the Unit (Hours)
1.	Complexity, Memory Allocation, and Arrays	08
2.	Sorting Techniques and Linked List	07
3.	Stack and Queue	08
4.	Tree and its Applications	08
5.	Graphs	08

B.**ETAILED SYLLABUS**

Unit	Unit Details
1.	Complexity, Memory Allocation, Arrays, and Searching Techniques
	<ul style="list-style-type: none"> • Introduction of Unit • Classification of data structures: primitive and non-primitive • Applications of data structures • Time and space complexity of an algorithm • Asymptotic Notations • Memory allocation functions: Malloc(), Calloc(), free() and realloc() • Array Operations • Search Techniques: Sequential search • Iterative and Recursive methods-Binary search • Conclusion of Unit
2.	Sorting Techniques and Linked List
	<ul style="list-style-type: none"> • Introduction of Unit

	<ul style="list-style-type: none"> • Sorting: General background and definition, • Bubble sort, Selection sort and Insertion sort • Merge sort and Quick sort. • Radix Sorts • Complexity of Sorting Algorithms • Components of linked list, Representation of linked list, • Advantages and disadvantages of linked list. • Types of linked list: Singly linked list, doubly linked list, Circular linked list, • Operations on singly linked list: creation, insertion, deletion, search and display. • Conclusion of Unit
3.	Stack and Queue
	<ul style="list-style-type: none"> • Introduction of Unit • Stack – Definition, Array representation of stack, • Operations on stack: Infix, prefix and postfix notations, • Conversion of an arithmetic expression from Infix to postfix, • Applications of stacks. • Queue: Definition, Array representation of queue, • Types of queue: Simple queue, Circular queue, Double ended queue (deque), Priority queue, • Operations on all types of Queues • Conclusion of Unit
4.	Tree and its Applications
	<ul style="list-style-type: none"> • Introduction of Unit • Binary Trees - Operations on Binary trees • Binary Tree Representations - node representation, • Internal and external nodes, implicit array representation • Binary Search Tree (BST), • BST Insertions, Searching, Traversing and Deletions • Introduction to AVL Tree, Heap Tree and General trees • Conclusion of Unit

5. Graphs	
	<ul style="list-style-type: none"> • Introduction of Unit • Graphs - An application of graphs - Representation • Shortest path algorithm - a flow Problem • Dijkstra's algorithm - An application of scheduling • Graph Traversals • Minimum Spanning Tree- Prims and Kruskal's Algorithm • Conclusion of Unit

MAPPING OF CO VS PO/PSO

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3
CO1	-	2	2	2	-	-	-	-	-	-	-	-	-	-	-
CO2	-	-	2	1	-	-	-	-	-	-	-	-	-	-	-
CO3	-	2	1	1	-	-	-	-	-	-	-	-	-	-	-
CO4	-	3	2	2	-	-	-	-	-	-	-	-	-	-	-
CO5	3	-	-	1	-	-	-	-	-	-	-	-	-	-	-

Note: On the basis of mapping of COs with POs, this course is related to Employability/Skill Development

COURSE OUTCOME

The student would be able to:

- Memorize Python basics and its data types.
- Use flow control to solve problems.
- Create functions to facilitate code reuse and flow control structure.
- Interpret the fundamental Python syntax and semantics and be fluent in the use of Python control flow statements.
- Identify the commonly used operations involving file systems and regular expressions.

A. OUTLINE OF THE COURSE

Unit No.	Title of the unit	Time required for the Unit (Hours)
1.	Introduction To Python and Data Types	08
2.	Python Program Flow Control	07
3.	Python Functions, Modules and Packages	08
4.	Python String, List and Dictionary Manipulations	07
5.	Python File Operation	08

DETAILED SYLLABUS

Unit	Unit Details
1	Introduction To Python and Data Types
	<ul style="list-style-type: none"> • Introduction of Unit • Installation and Working with Python • Understanding Python variables, Operators • Understanding python blocks • Declaring and using Numeric data types: int, float, complex • Using string data type and string operations • Defining list and list slicing • Use of Tuple data type • Conclusion of Unit
2	Python Program Flow Control
	<ul style="list-style-type: none"> • Introduction of Unit • Conditional blocks using if, else and elif

	<ul style="list-style-type: none"> • Simple for loops in python • For loop using ranges, string, list and dictionaries • Use of while loops in python • Loop manipulation using pass, continue, break and else • Programming using Python conditional and loops block • Conclusion of Unit
3 Python Functions, Modules And Packages	
	<ul style="list-style-type: none"> • Introduction of Unit • Organizing python codes using functions • Organizing python projects into modules • Importing own module as well as external modules • Understanding Packages • Powerful Lamda function in python • Programming using functions, modules and external packages • Conclusion of Unit
4 Python String, List and Dictionary Manipulations	
	<ul style="list-style-type: none"> • Introduction of Unit • Building blocks of python programs • Understanding string in build methods • List manipulation using in build methods • Dictionary manipulation • Programming using string, list and dictionary in build functions. • Conclusion of Unit
5 Python File Operation	
	<ul style="list-style-type: none"> • Introduction of Unit • Reading various types of files in python • Writing log files in python • Understanding read functions, read(), readline() and readlines() • Understanding write functions, write() and writelines() • Manipulating file pointer using seek

	<ul style="list-style-type: none"> • Programming using file operations. • Conclusion of Unit
--	--

CO4	-	-	2	2	1	-	-	-	-	-	-	-	-	-	-
CO5	-	3	2	1	-	-	-	-	-	-	-	-	-	-	-

Note: On the basis of mapping of COs with POs, this course is related to Employability/Skill Development

COURSE OUTCOME

Students will be able to:

- Use various Linux commands that are used to manipulate system operations at admin level and a prerequisite to pursue job as a Network administrator.
- Write Shell Programming using Linux commands.
- Design and write application to manipulate internal kernel level Linux File System.
- Develop IPC-API's that can be used to control various processes for synchronization.
- Develop Network Programming that allows applications to make efficient use of resources available on different machines in a network.

A. OUTLINE OF THE COURSE

Unit No.	Title of The Unit	Time required for the Unit (Hours)
1.	Introduction to Linux and Linux utilities	07
2.	Introduction to shells	08
3.	Unix file structure	08
4.	Process and signals	07
5.	Inter process communication	07

B. DETAILED SYLLABUS

Unit	Unit Details
1.	Introduction to Linux and Linux utilities
	<ul style="list-style-type: none"> • Introduction of Unit • INTRODUCTION TO LINUX AND LINUX UTILITIES: A brief history of LINUX, architecture of LINUX, • features of LINUX, introduction to vi editor. • Linux commands- PATH, man, echo, printf, script, passwd, uname, who, date, stty, pwd, cd, mkdir, rmdir, ls, cp, mv, rm, cat, more, wc, lp, od, tar, gzip, file handling utilities, security by file permissions, • process utilities, disk utilities, networking commands, unlink, du, df, mount, umount, find, unmask, • ulimit, ps, w, finger, arp, ftp, telnet, rlogin. Text Processing utilities and backup utilities , tail, head , • sort, nl, uniq, grep, egrep, fgrep, cut, paste, join, tee, pg, comm, cmp, diff, tr, awk, cpio • Conclusion of Unit
2.	Introduction to shells
	<ul style="list-style-type: none"> • Introduction of Unit • Introduction to Shells: Linux Session, Standard Streams, Redirection, Pipes, Tee Command, • Command Execution, Command-Line Editing, Quotes, Command Substitution, Job Control, Aliases, • Variables, Predefined Variables, Options, Shell/Environment Customization. • Filters: Filters and Pipes, Concatenating files, Display Beginning and End of files, Cut and Paste, • Sorting, Translating Characters, Files with Duplicate Lines, Count Characters, Words or Lines, • Comparing Files. • Conclusion of Unit
3.	Unix file structure

	<ul style="list-style-type: none"> • Introduction of Unit • Grep: Operation, grep Family, Searching for File Content. • Sed :Scripts, Operation, Addresses, commands, Applications, grep and sed. • UNIX FILE STRUCTURE: Introduction to UNIX file system, inode (Index Node), file descriptors, • system calls and device drivers. • Conclusion of Unit
4.	Process and signals
	<ul style="list-style-type: none"> • Introduction of Unit • PROCESS AND SIGNALS: Process, process identifiers, process structure: process table, viewing processes, system processes, process scheduling, starting new processes: waiting for a process, • zombie processes, orphan process, fork, vfork, exit, wait, waitpid, exec, signals functions, unreliable • signals, interrupted system calls, kill, raise, alarm, pause, abort, system, sleep functions, signal sets. • File locking: creating lock files, locking regions, use of read and write with locking, competing locks, other lock commands, deadlocks. • Conclusion of Unit
	Inter process communication
	<ul style="list-style-type: none"> • Introduction of Unit • INTER PROCESS COMMUNICATION: Pipe, process pipes, the pipe call, parent and child processes, and named pipes: fifos, semaphores: semget, semop, semctl, message queues: msgget, msgsnd, msgrcv, msgctl, shared memory: shmget, shmat, shmdt, shmctl, ipc status commands. • INTRODUCTION TO SOCKETS: Socket, socket connections - socket attributes, socket addresses, • socket, connect, bind, listen, accept, socket communications. • Awk and perl Programming: Awk pattern scanning and processing language, BEGIN and END patterns, Awk arithmetic and variables, Awk built in variable names and operators, arrays, strings, • functions, perl; the chop() function, variable and operators, \$_ and \$. , Lists, arrays, regular expression and substitution, file handling, subroutines, formatted printing. • Conclusion of Unit

Practical

Code: MCACCA1201

Programming in C Lab

1Credits [LTP: 0-0-2]

Course Outcome:-

Students will be able to:

- Demonstrate concept of functional hierarchical code organization.
- Work with textual information, characters and strings
- Implement file handling concepts
- Implement real time applications using the power of C language features.
- Handle possible errors during program execution.

A. LIST OF EXPERIMENTS:

1	Given the values of the variables x, y and z, write a program to rotate their values such that x has the value of y, y has the value of z, and z has the value of x
2	Write a program that reads a floating point number and then displays the right-most digit of the integral part of the number.
3	Write a C program to calculate the sum of digits of given number.
4	Program to find largest and smallest number from four given number.
5	Program to find whether a year is leap or not.
6	Write a C program in which enter any number by the user and perform the operation of Sum of digits of entered number.
7	Write a C Program to convert Decimal number to Binary number.
8	Find the sum of this series up to n terms $1+2+3+4+5+6+\dots$
9	Program to print Armstrong's numbers from 1 to 100.
10	Write a program to convert years into Minute, Hours, Days, Months, Seconds using switch () statements
11	Write a C menu driven program
12	Write a program to generate the various pattern of numbers
13	Write a C Program to print the reverse of an integer number
14	Write a C program to perform the factorial of given number
15	Write a C program in which a function prime that returns 1 if its argument is a prime and return zero otherwise.
16	Write a C program to calculate factorial of a number using recursion
17	Write a C program in which enter 10 elements by the user and perform the operation of sorting in ascending order

18	Write a C program to perform to perform Matrix addition and multiplication operations
19	Write a program to determine the length of the string and find its equivalent ASCII codes.
20	Write a program to delete all the occurrences of the vowels in a given text. Assume that the text length will be of one line
21	Write a program to maintain the library record for 100 books with book name, author's name, and edition, year of publishing and price of the book

MAPPING OF CO VS PO/PSO

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3
CO1	3	2	-	-	-	-	-	-	-	-	-	-	-	-	-
CO2	-	3	2		-	-	-	-	-	-	-	-	-	-	-
CO3	-	2	-	-	-	-	-	-	-	-	-	-	-	-	-
CO4	-	3	2	2	-	-	-	-	-	-	-	-	-	-	-
CO5	-	-	2	1	-	-	-	-	-	-	-	-	-	-	-

Note: On the basis of mapping of COs with POs, this course is related to Employability/Skill Development

Course Outcome:-

Students will be able to:

- Develop skills to design and analyze simple linear and nonlinear data structures.
- Choose appropriate data structures to represent data items in real world.
- Implement and know the application of algorithms for sorting and searching and data items.
- Design data structures such as stacks, queues, hash tables, binary trees, search trees, heaps, graphs, and B-trees according to the requirement of software.
- Implement ADTs such as lists, graphs, search trees in C to solve problems

A. LIST of PROGRAMS:

1.	Write a program to implement the linear array operations. (a) Insert an integer into a given position in an array. (b) Delete an integer from an array.
2.	Write a program to perform the following operations on matrix using array: Addition, Multiplication, Transpose
3.	Write a program to implement binary search.
4.	Write a program to sort N numbers using selection sort.
5.	Write a program to sort N numbers using bubble sort.
6.	Write a program to sort N numbers using insertion sort.
7.	Write a program to implement merge sort
8.	Write a program to implement quick sort.
9.	Write a program to implement stack operations
10.	Write a program to implement queue operations
11.	Creating a binary search tree and traversing it using in order, pre order and post order.
12.	Perform deletion operation on binary search tree
13.	Create singly linked list and perform following operations on it.
14.	Inserting a node into a singly linked list.
15.	Deleting a node from a singly linked list.
16.	Searching a node from a singly linked list.
17.	Create a doubly linked list and perform insertion and deletion operations
18.	Write a program to implement BFS & DFS

MAPPING OF CO VS PO/PSO

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3
CO1	-	3	2	2	2	-	-	-	-	-	-	-	-	-	-
CO2	-	3	2	2	-	-	-	-	-	-	-	-	-	-	-
CO3	-		1	1	-	-	-	-	-	-	-	-	-	-	-
CO4	-	-	2	2	1	-	-	-	-	-	-	-	-	-	-
CO5	-	3	2	-	-	-	-	-	-	-	-	-	-	-	-

Note: On the basis of mapping of COs with POs, this course is related to Employability/Skill Development

COURSE OUTCOME

Students will be able to:

- Get the basic set of commands and utilities in Linux/UNIX systems
- Able to work on VI editor and its commands
- Apply the concept of shell script to do basic programming.
- Implement Shell script to perform conditional statements
- Implement Shell script to perform Looping statements.

A. LIST OF EXPERIMENTS:

1	Study of Linux basic commands: cal, date, echo, printf, bc, script, mailx, passwd, who, uname, tty, stty, pwd, cd, mkdir, rmdir, ls, cat, cp, rm, mv, more, file, wc, od, cmp,comm, diff, chmod, vi.
2	Study of vi editor
3	Write a Script to print “hello world”
4	Write a script to create function.
5	Write a script to implement local variables.
6	Write a script to implement if...else.
7	Write a script to study for, while and until
8	Write a script that finds the prime factors of a given number.
9	a) Write a script to check if the two strings are same or not. b) Write a shell script to check the given number is Odd/Even
10	Write a script that will print a message “Good Morning” or “Good Afternoon” according to the user login time
11	Linux Commands: cmp, find, grep, od, tar, ps, df, du, finge, kill, nice, nonhup, sleep, test, umask, who, cal, tee, expr, uname, fsck, xargs. Filters for stream handling features of the shell for input and output. E.g. pr, head, tail, cut, paste, sort, nl, uniq, tr.
12	a) Write a shell script to show the Palindrome number b) Write a script to show the Factorial value of the given value

CO5	-	-	2	1		-	-	-	-	-	-	-	-	-	-

Note: On the basis of mapping of COs with POs, this course is related to Employability/Skill Development

COURSE OUTCOME

Students will be able to:

- Use shell script to create files and handle text documents
- Create child processes, background process and zombies
- Familiarize basic concepts of shell programming
- Demonstrate use of system calls
- Demonstrate Inter process communication

A. LIST OF EXPERIMENTS:

1	Study and Practice on various commands like man, passwd, tty, script, clear, date, cal, cp, mv, ln, rm, unlink, mkdir, rmdir, du, df, mount, umount, find, unmask, ulimit, ps, who, w.
2	Study and Practice on various commands like cat, tail, head, sort, nl, uniq, grep, egrep, fgrep, cut, paste, join, tee, pg, comm, cmp, diff, tr, awk, tar, cpio.
3	a) Write a Shell Program to print all .txt files and .c files. b) Write a Shell program to move a set of files to a specified directory.
4	c) Write a Shell program to display all the users who are currently logged in after a specified time. d) Write a Shell Program to wish the user based on the login time.
5	a) Simulate cat command. b) Simulate cp command.
6	a) Simulate head command. b) Simulate tail command.
7	a) Simulate mv command. b) Simulate nl command.
8	Write a program to handle the signals like SIGINT, SIGQUIT, SIGFPE.
9	Implement the following IPC forms a) FIFO b) PIPE
10	Implement message queue form of IPC.
11	Implement shared memory form of IPC.
12	Write a Socket program to print system date and time (Using TCP/IP).

Minor Courses

Theory

Code: MCYCCA1101

Introduction to Cyber Security

3 Credits [LTP: 3-0-0]

COURSE OUTCOME

Students will be able to:

- Describe the basic concepts and importance of information security
- Evaluate threats to information security, analyze their impact and propose suitable countermeasures
- Apply various aspects of securing network infrastructure and importance of classifying information
- Analyze to understand the concepts of IT security, Threats, Vulnerabilities, Impact and control measures
- Create asset management along with the objective to create awareness in Digital Rights Management.

Note: On the basis of mapping of COs with POs, this course is related to Employability/Skill Development

Ability Enhancement Courses (AEC)

Code: MULCHU1201

Personality Development and Emotional Intelligence

1 Credit [LTP:0-0-2]

Course Outcomes:

On successful completion of the course the learners will be able to

- Realize the art of Power Dressing and making a great first impression by polishing their Corporate/ Business manners.
- Enhance their self-esteem, confidence and assertive behaviour to handle difficult situations with grace, style, and professionalism.
- Apply the understanding of harmony in existence in their profession and lead an ethical life.
- Recognize and use emotional intelligence to create and maintain productive workplace relationships and team environment.
- Apply collaborative, inclusive and creative communication skills.

A. OUTLINE OF THE COURSE

Unit No.	Title of the Unit	Time required for the Unit (Hours)
1	Personal Grooming & Attitude Building	6
2	Mentoring & Interpersonal Skills	6
3	Conflict & Stress Management	7
4	Social Skills Development	7
5	Self Esteem Enhancement	2

B. DETAILED SYLLABUS

Unit	Unit Details	Method
1.	Personal Grooming & Attitude Building	
	<ul style="list-style-type: none"> • Introduction of the Course & the topic • Impactful Personality • Attitude Building Activities • Self-Grooming & Dressing Sense • Time Management • Team Building Activities • Conclusion & Summary of the Unit 	<ul style="list-style-type: none"> • Theory/Pra ctical • Theory • Practical • Practical • Practical • Practical • Theory/ Practical
2.	Mentoring & Interpersonal Skills	
	<ul style="list-style-type: none"> • Introduction of the topic • Mentoring: Coaching one or more people • Leadership: Leading and assisting others by example • Problem Solving: Resolving personal, group, and business conflict • Communicating with Confidence • Conclusion & Summary of the Unit 	<ul style="list-style-type: none"> • Theory/Pra ctical • Practical • Practical • Practical • Practical • Theory/ Practical
3.	Conflict & Stress Management	

	<ul style="list-style-type: none"> • Introduction of the topic • The role of communication in conflict/stress and conflict/stress management processes. • Analyse the components of conflict/stress that lead to constructive or destructive communication patterns. • Recommend effective conflict/stress management communication for a given situation • Practice Sessions. • Conclusion & Summary of the Unit 	<ul style="list-style-type: none"> • ctical Theory/Pra • ctical Theory/Pra • ctical Theory/Pra • ctical Theory/Pra • ctical Practical • ctical Theory/Pra
4.	Social Skills Development	
	<ul style="list-style-type: none"> • Introduction of the topic • Listening Skills activities • Social Problem Solving • Being a part of the group and expression of feelings • Conclusion & Summary of the Unit 	<ul style="list-style-type: none"> • ctical Theory/Pra • Practical • Practical • Practical • Theory/Pra • ctical
5.	Self Esteem Enhancement	
	<ul style="list-style-type: none"> • Introduction of the topic • Face your Fear & Speak with Confidence • Case Study/Class Survey • Personal Growth & Development Session • Conclusion & Summary of the Unit 	<ul style="list-style-type: none"> • ctical Theory/Pra • Practical • Practical • Practical • Theory/Pra • ctical

Skill Enhancement Courses (SEC)

Code: MULCSE1201

Skill Enhancement Generic Course-I

1 Credit [LTP:0-0-2]

COURSE OUTCOMES:

Students will be able to:

CO.1: Enhance problem solving skills.

CO.2: Prepare for various public and private sector exams & placement drives

CO.3: Communicate effectively & appropriately in real life situation.

CO.4: Improve verbal ability skill among students.

CO.5: Enrich their knowledge and to develop their logical reasoning thinking ability.

LIST OF ACTIVITIES

LIST OF ACTIVITIES	
1	SMART Goals, Goal Setting (IKIGAI), Wheel of Satisfaction, Exchanging pleasantries
2	Root Words, Prefix-Suffix, Antonyms, Synonyms & Analogies, Sentence Correction-1
3	Numbers, Relations & Functions, HCF & LCM, Average & Divisibility
4	Resume Tips & Resume Review
5	How to win friends & Influence people, Sentence Correction-2
6	Series & Progressions
7	Number Series & Letter Series, Crypto-arithmetic, SWOT/SWOC
8	Percentage, Profit & Loss, Ratio Proportion, CI & SI
9	Mixtures and Allegations, Short Cut Tricks, Seating Arrangement, Sequencing & Ranking
10	Surds & Indices, Problem on ages, Solving Equations - Quadratic & Linear
11	Time & Distance, Boats & Streams, Clocks and Calendars
12	GD, Practice of GD, Reading and Comprehension

Semester-II

COURSE OUTCOME

- Describe the concepts and features of object oriented programming
- Execute java's exception handling mechanism, multithreading, packages and interfaces.
- Implement object oriented programming concepts using java
- Apply object oriented programming features and concepts for solving given problem
- Implement the concept of class and objects with access control to represent real world entities.

A. OUTLINE OF THE COURSE

Unit No.	Title of The Unit	Time required for the Unit (Hours)
1.	Introduction to Java	08
2.	Working with classes ,objects and Inheritance	09
3.	Packages, Interfaces & Exception Handling	09
4.	Multithreaded Programming & Applet	07
5.	JAVA Database Connectivity (JDBC) and Java 8 Features	07

B. DETAILED SYLLABUS

Unit	Unit Details
1.	Introduction to Java
	<ul style="list-style-type: none"> • Introduction to Unit • History and Overview of Java • Object Oriented Programming features. • Class Fundamentals • Declaring objects, Assigning object reference variables. • Literals, variables comments, separators, • Scope and Life Time of Variables • Data types - Integers, Floating point, characters, Boolean, • Type conversion and casting • Operators - Arithmetic operators, Bit wise operators, Relational Operators, Boolean Logical operators, Assignment Operator, Operator Precedence. • Conclusion of unit
2.	Working with classes, objects and Inheritance
	<ul style="list-style-type: none"> • Introduction to Unit

	<ul style="list-style-type: none"> Control Statements – Selection Statements - if, Switch, Iteration Statements - While, Do-while, for Nested loops, Jump statements. Methods - constructors, “this” keyword, finalize () method A stack class, Over loading methods. Using objects as parameters, Argument passing, Returning objects. Recursion, Access control, introducing final, understanding static. Introducing Nested and Inner classes. Command line arguments. Inheritance – Basics, Using super, method overriding, and Dynamic method Dispatch, Using abstract classes and final with Inheritance. Conclusion of Unit
3. Packages, Interfaces & Exception Handling	
	<ul style="list-style-type: none"> Introduction to Unit Definition and Implementation, Access protection importing packages. Interfaces: Definition and implementation. Exception Handling – Fundamentals, types, Using try and catch Multiple catch clauses Nested try Statements, Throw, finally. User Defined Exception Conclusion of Unit
4. Multithreaded Programming & Applet	
	<ul style="list-style-type: none"> Introduction of Unit Java thread model – main thread, creating single Multithreading Is alive () and join () Methods Thread – Priorities, Synchronization Inter thread communication, suspending, resuming and stopping threads Reading control input, writing control output, Reading and Writing files. Applet Fundamentals – AWT package AWT Event handling concepts. Conclusion of Unit
5. JAVA Database Connectivity (JDBC) and Java 8 Features	
	<ul style="list-style-type: none"> Introduction to Unit

	<ul style="list-style-type: none"> • Database connectivity – JDBC architecture and Drivers. • JDBC API - loading a driver, connecting to a database, creating and executing JDBC statements • Handling SQL exceptions. • Accessing result sets: types and methods. • JDBC application to query a database. • Introduction to java 8 features :-Functional Interfaces And Lambda Expressions • Conclusion of Unit
--	---

CO4	3	-	-	-	-	-	-	-	-	-	-	-	-	-	-
CO5	-	3	2	-	-	-	-	-	-	-	-	-	-	-	-

Note: On the basis of mapping of COs with POs, this course is related to Employability/Skill Development

COURSE OUTCOME

After completion of the course, the students will be able to:

- Analyze the asymptotic performance of algorithms
- Choose appropriate algorithm design paradigm like Divide and Conquer and Greedy for solving engineering problems
- Apply Dynamic Programming and Backtracking to solve engineering problems
- Solve common engineering design problems using Randomize algorithms
- Evaluate arithmetic expressions using parallel model.

A. OUTLINE OF THE COURSE

Unit No.	Title of The Unit	Time required for the Unit (Hours)
1	Introduction to Analysis of Algorithms	07
2	Divide and Conquer and Greedy Methods	08
3	Dynamic Programming and Backtracking	08
4	Randomized Algorithms	07
5	Parallel Models	07

B.DETAILED SYLLABUS

Unit	Unit Details
1.	Introduction to Analysis of Algorithms
	<ul style="list-style-type: none"> • Introduction of Unit • Algorithm definition and specification, Design of Algorithms, and Complexity of Algorithms, Asymptotic Notations, Growth of function, Recurrences, • Performance analysis • Elementary Data structures:- stacks and queues, trees, dictionaries, priority queues – sets and disjoint set union, graphs, basic traversal and search techniques. • Conclusion of Unit
2.	Divide and Conquer and Greedy Methods
	<ul style="list-style-type: none"> • Introduction of Unit • Divide and conquer:- General method, binary search, merge sort, Quick sort, • The Greedy method:-General method, knapsack problem, minimum cost spanning tree, single source shortest path. • Conclusion of Unit
3.	Dynamic Programming and Backtracking
	<ul style="list-style-type: none"> • Introduction of Unit

	<ul style="list-style-type: none"> • Dynamic Programming, general method, multistage graphs, all pair shortest path, optimal binary search trees, 0/1 Knapsack, traveling salesman problem, flow shop scheduling. • Backtracking:- general method, 8-Queens problem, sum of subsets, graph coloring, Hamiltonian cycles, knapsack problem, Branch and bound:- The Method, 0/1 Knapsack problem, traveling salesperson. • Conclusion of Unit
4. Randomized Algorithms	
	<ul style="list-style-type: none"> • Introduction of Unit • Randomized Algorithms: Las Vegas algorithms, Monte Carlo algorithms, randomized algorithm for Min-Cut, randomized algorithm for 2- SAT. Problem definition of Multicommodity flow, Flow shop scheduling and Network capacity assignment problems. • Conclusion of Unit
5. Parallel Models	
	<ul style="list-style-type: none"> • Introduction of Unit • Parallel models:-Basic concepts, performance Measures, • Parallel Algorithms: Parallel complexity, Analysis of Parallel Addition, Parallel Multiplication and division • Parallel Evaluation of General Arithmetic Expressions, First-Order Linear recurrence. • Conclusion of Unit

CO5	-	-	-	-	-	-	-	-	-	-	-	-	-	-	-

Note: On the basis of mapping of COs with POs, this course is related to Employability/Skill Development

Course Outcome

Students will be able to

- Describe DBMS architecture, physical and logical database designs, database modeling, relational, hierarchical and network models.
- Identify basic database storage structures and access techniques such as file organizations, indexing methods including B-tree, and hashing.
- Learn and apply structured query language (SQL) for database definition and database manipulation.
- Demonstrate an understanding of normalization theory and apply such knowledge to the normalization of a database.
- Learn various transaction processing, concurrency control mechanisms and database protection mechanisms.

A. OUTLINE OF THE COURSE

Unit No.	Title of the unit	Time required for the Unit (Hours)
1	Introduction to Database Management System	7
2	RDBMS	7
3	SQL	7
4	PL/SQL	8
5	Oracle, Trigger and wrapping	7

B. DETAILED SYLLABUS

Unit	Unit Details
1.	Introduction to Database Management System
	<ul style="list-style-type: none"> • Introduction to Database Management System • Characteristics of database approach • Advantages of DBMS • Schemas: Three schema architecture - The external level, the conceptual level and the internal level. • Data Independence • Database languages and Interfaces • Roles of Database Administrator • Introduction to Data Models (Hierarchical, Network and Relation) • Entity type, Entity sets, Attributes and keys. • The ER Model: ER Diagram & Database design with the ER Model • Conclusion of the Unit
2.	RDBMS
	<ul style="list-style-type: none"> • Introduction to Distributed Database • Classification of DBMS • Introduction to RDBMS • Relational Model –Concepts • Relational operations (Insert, delete, update, select, project, rename, union, intersection, minus, Join, division) • Transactions and ER mapping Examples • Normalization of RDBMS (1NF, 2NF, 3NF and 4NF) and inference rules. • Conclusion of the Unit
3.	SQL
	<ul style="list-style-type: none"> • Introduction to Unit • DBMS v/s RDBMS • Introduction to SQL: Data types, Constraints • Commands in SQL: Create table, Drop command, Alter Queries in SQL • Statements in SQL (Insert, delete and update) • Features of SQL

	<ul style="list-style-type: none"> • Manipulation of data • Tables in SQL • Conclusion of the Unit
4.	PL/SQL
	<ul style="list-style-type: none"> • Introduction to PL/SQL • Approaches to database programming: with function calls, Embedded SQL using CURSORS, Dynamic SQL, SQL commands in Java, Retrieving multiple triples using Iterators • Advantages of PL/SQL • Features of PL/SQL :Blocks structure, Error handling, Input and output designing, variables and constant, data abstraction, control structures and subprogram • Fundamentals of PL/SQL : character sets, lexical, delimiters, identifiers, declarations, scope and visibility, Static and dynamic and static SQL, Implicit and explicit locking • Conclusion of the Unit
5.	Oracle, Trigger and wrapping
	<ul style="list-style-type: none"> • Introduction to Oracle, Trigger and wrapping • Functions/responsibilities of DBA • Oracle product details • Oracle files, System and User process • Oracle Memory • Protecting data: Oracle backup & recovery • Triggers - types, uses, data access for triggers • PL/SQL Packages and Wrapping • Conclusion of the Unit

PRACTICAL

Code:MCACCA2201

OOPS with Java Lab

1 Credit [LTP: 0-0-2]

Course Outcomes:

Students will be able to:

- Implement object oriented programming concepts to solve real world problems
- Implement the concept of class and objects with access control to represent real world entities.
- Apply different techniques on creating and accessing packages (fully qualified name and import statements).
- Create concepts on file streams and operations in java programming for a given application programs
- Create the backend connectivity process in java program by using JDBC drivers

A. LIST OF EXPERIMENTS:

1	A. Write a program to print “Hello World” in Java. B. Write a program to add two numbers C. Write a program to demonstrate the different access specifiers D. Write a program which uses different packages
2	A. Write a program to demonstrate inheritance, abstraction, encapsulation and Polymorphism. B. Write a program to find the factorial of n numbers C. Write a program to calculate Fibonacci series D. Write a program to add n numbers and series
3	A. Write a program to create an array and store elements into the array. B. Write a program to find the sum of elements in an array C. Write a program to demonstrate switch case, if, if-else and for loop
4	A. Write a program to demonstrate the working of methods. B. Write a program which has four methods – add(), subtract(), multiply() and divide() and demonstrate a simple console calculator. C. Write a program to accept command line arguments and display them to the user
5	A. Write a program to create a package. B. Write a program to handle different exceptions
6	A. Write a program to demonstrate try-catch, throw and throws. B. Write a program for user defined exception
7	A. Write a program to read a file Write a program to write into a file
8	Write a program to demonstrate client server communication (socket programming)
9	Write a program to create threads and manipulate them
10	Write a program to create a user interface to check user authentication.
11	Write a program to create a registration form and save the details into a file
12	Write a program to save and fetch the details from database

MAPPING OF CO VS PO/PSO

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3
CO1	2	3	-	-	-	-	-	-	-	-	-	-	-	-	-
CO2	1	2	3	-	-	-	-	-	-	-	-	-	-	-	-
CO3	1	2	3	-	-	-	-	-	-	-	-	-	-	-	-
CO4	1	2	3	-	-	-	-	-	-	-	-	-	-	-	-
CO5	-	-	-	-	-	-	-	-	-	-	-	-	-	-	-

Note: On the basis of mapping of COs with POs, this course is related to Employability/Skill Development

Course Outcomes:

Students will be able to:

- Design an algorithm in an effective manner
- Apply iterative and recursive algorithms.
- Design iterative and recursive algorithms.
- Implement optimization algorithms for specific applications.
- Design optimization algorithms for specific applications

LIST OF EXPERIMENTS:

1	Sort a given set of elements using the Quicksort method and determine the time required to sort the elements. Repeat the experiment for different values of n , the number of elements in the list to be sorted. The elements can be read from a file or can be generated using the random number generator.
2	Implement a Merge Sort algorithm to sort a given set of elements and determine the time required to sort the elements. Repeat the experiment for different values of n , the number of elements in the list to be sorted. The elements can be read from a file or can be generated using the random number generator.
3	A. Obtain the Topological ordering of vertices in a given digraph. B. Compute the transitive closure of a given directed graph using Warshall's algorithm.
4	Implement 0/1 Knapsack problem using Dynamic Programming.
5	From a given vertex in a weighted connected graph, find shortest paths to other vertices using Dijkstra's algorithm
6	Find Minimum Cost Spanning Tree of a given undirected graph using Kruskal's algorithm.
7	A. Print all the nodes reachable from a given starting node in a digraph using BFS method. B. Check whether a given graph is connected or not using DFS method.
8	Find a subset of a given set $S = \{s_1, s_2, \dots, s_n\}$ of n positive integers whose sum is equal to a given positive integer d . For example, if $S = \{1, 2, 5, 6, 8\}$ and $d = 9$ there are two solutions $\{1, 2, 6\}$ and $\{1, 8\}$. As suitable message is to be displayed if the given problem instance doesn't have a solution.
9	Implement any scheme to find the optimal solution for the Traveling Salesperson problem and then solve the same problem instance using any approximation algorithm and determine the error in the approximation.
10	Find Minimum Cost Spanning Tree of a given undirected graph using Prim's algorithm.
11	Implement All-Pairs Shortest Paths Problem using Floyd's algorithm.
12	Implement N-Queen's problem using Back Tracking.

MAPPING OF CO VS PO/PSO

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3
CO1	1	2	3	-	-	-	-	-	-	-	-	-	-	-	-
CO2	-	3	-	-	-	-	-	-	-	-	-	-	-	-	-
CO3	1	2	3	-	-	-	-	-	-	-	-	-	-	-	-
CO4	1	2	3	-	-	-	-	-	-	-	-	-	-	-	-
CO5	1	2	3	-	-	-	-	-	-	-	-	-	-	-	-

Note: On the basis of mapping of COs with POs, this course is related to Employability/Skill Development

Course Outcome:-

Students will be able:

- Appreciate, define and effectively demonstrate the underlying concepts of database technologies.
- Design and implement a database schema for a given problem-domain.
- Populate and query a database using SQL DML/DDL commands.
- Declare and enforce integrity constraints on a database using a state-of-the-art RDBMS.
- Programming PL/SQL including stored procedures, stored functions, cursors, packages.

A. LIST OF EXPERIMENTS:

1.	To setup and removal phases of a Student database using the basic Data Definition Language (DDL) commands: 1. CREATE 2. ALTER 3. DROP 4. RENAME 5. TRUNCATE
2.	The routine operation of the Employee database like retrieve, insert and modify by basic Data Manipulation Language (DML) commands: 1. INSERT 2. UPDATE 3. DELETE
3.	To Retrieve data from one or more tables using DATA RETRIEVAL LANGUAGE (DRL) commands <ul style="list-style-type: none"> • SELECT FROM • SELECT - FROM –WHERE • SELECT - FROM -GROUP BY • SELECT - FROM -ORDER BY • JOIN using SELECT - FROM - ORDER BY • JOIN using SELECT - FROM - GROUP BY • UNION • INTERSET • MINUS
4.	DATA CONTROL LANGUAGE (DCL) and TRANSATIONAL CONTROL LANGUAGE (TCL) commands. i. Creating objects: tables, views, users, sequences, Collections etc. ii. Privilege management through the Grant and Revoke commands iii. Transaction processing using Commit and Rollback iv. Save points.
5.	Queries for following functions i. Conversion functions (to_char, to_number and to_date) ii. string functions (Concatenation, lpad, rpad, ltrim, rtrim, lower, upper, initcap, length, substr and instr), iii. date functions (Sysdate, next_day, add_months, last_day, months_between, least, greatest, trunc, round, to_char, to_date)
6.	Simple queries: selection, projection, sorting on a simple table for employee database i. Small-large number of attributes ii. Distinct output values iii. Renaming attributes iv. Computed attributes v. Simple-complex conditions (AND, OR, NOT) vi. Partial Matching operators (LIKE, %, _, *, ?)

	vii. ASC-DESC ordering combinations viii. Checking for Nulls
7.	To manipulate data items and returning the results using Group functions or Aggregate functions and Single Row or scalar functions: i. Group functions or Aggregate functions: Sum(), Avg(), Min(), Max() and Count() ii. Single Row or scalar function: Abs(), Power(), Sqrt(), Round(), Exp(), Greastest(), Least(), Mod(), Floor(), Sign() and Log().
8.	Multi-table queries (JOIN OPERATIONS) i. Simple joins (no INNER JOIN) ii. Aliasing tables – Full/Partial name qualification iii. Inner-joins (two and more (different) tables) iv. Inner-recursive-joins (joining to itself) v. Outer-joins (restrictions as part of the WHERE and ON clauses) vi. Using where & having clauses
9.	Write Nested queries to retrieve the name of each employee who has a dependent with the same first name and same sex as the employee using following Nested queries. i. In, Not In ii. Exists, Not Exists iii. Dynamic relations (as part of SELECT, FROM, and WHERE clauses)
10	Write a query to make a list of all project numbers for projects that involve an employee whose last name is 'Smith', either as a worker or as a manager of the department that controls the project using the following Set Oriented Operations i. Union ii. Difference iii. Intersection iv. Division
11	PL/SQL Programming using the following i. Programs using named and unnamed blocks ii. Programs using Cursors, Cursor loops and records
12	PL/SQL Programming using i. Creating stored procedures, functions and packages ii. Error handling and Exception iii. Triggers and auditing triggers

Minor Stream Courses Theory

Code:MCYCCA2101

Ethical Hacking

3 Credits [LTP: 3-0-0]

COURSE OUTCOME

After completion of the course, the students will be able to:

- State the basic concepts and importance of information security
- Evaluate threats to information security, analyze their impact and propose suitable countermeasures
- Apply various aspects of securing network infrastructure and importance of classifying information
- Describe the concepts of IT security, Threats, Vulnerabilities, Impact and control measures.
- Create asset management along with the objective to create awareness in Digital Rights Management.

A. OUTLINE OF THE COURSE

Unit No.	Title of The Unit	Time required for the Unit (Hours)
1.	Introduction to Ethical Hacking	07
2.	Hacking methodologies	08
3.	Web Application hacking	08
4.	Database and Network hacking	07
5.	Report writing & Mitigation	07

B. DETAILED SYLLABUS

Unit	Unit Details
1.	Introduction to Ethical Hacking
	<ul style="list-style-type: none"> • Introduction of Unit • Hacking vs. Ethical Hacking • Hacking Methodologies • Footprinting and Scanning • Trojans and Viruses • Black Box vs. White Box Techniques • Conclusion of Unit
2.	Hacking methodologies
	<ul style="list-style-type: none"> • Introduction to Unit • Denial of Service and DDOS • Sniffers, Session Hijacking and Hacking Web Servers • Attack on CIA Triad • Conclusion of the Unit
3.	Web Application hacking
	<ul style="list-style-type: none"> • Introduction of Unit • Web Application Vulnerabilities • Web Techniques Based Password Cracking • Web Jacking and its tools

	<ul style="list-style-type: none"> • Phishing and its tools • Conclusion of Unit
4.	Database and Network Hacking
	<ul style="list-style-type: none"> • Introduction of Unit • SQL Injection • Hacking Wireless Networking • Worms and Physical Security • Evading IDS and Firewalls • Conclusion of Unit
5.	Report Writing & Mitigation
	<ul style="list-style-type: none"> • Introduction of Unit • Introduction to Report Writing & Mitigation • Requirements for low level reporting & high level reporting of Penetration testing results • Demonstration of vulnerabilities and Mitigation of issues identified including tracking • Conclusion of Unit

Note: On the basis of mapping of COs with POs, this course is related to Employability/Skill Development

COURSE OUTCOME

Students should be able to:

- Evaluate and document potential security breaches of computer data that suggest violations of legal, ethical, moral, policy, and/or societal standards
- Apply a solid foundational grounding in computer networks, operating systems, file systems, hardware, and mobile devices to digital investigations and to the protection of computer network resources from unauthorized activity
- Remember collaboratively with clients, management, and/or law enforcement to advanced digital investigations or protect the security of digital resources
- Analyze the key points toward the crime scene and handling the data related to the same
- Synthesize students with the deep knowledge toward the forensic investigation

A. OUTLINE OF THE COURSE

Ethical Hacking Lab

1 Credit [LTP: 0-0-2]

Course outcomes:

Students will be able to:

- Translate end-user requirements into system and software requirements
- Generate a high-level design of the system from the software requirements
- Get experience and/or awareness of testing problems and will be able to develop a simple testing report
- Create and analyze Trojans
- Use different Data recovery and password protecting tool's for network security and analysis

A. LIST OF EXPERIMENTS:

1	Passive Reconnaissance using “Whois” and Online tools.
2	Active Reconnaissance using “Samspade” and website details
3	Full Scan, Half Open Scan and Stealth scan using “nmap”
4	UDP and Ping Scanning using “Advance LAN Scanner” and “Super Scanner”
5	Packet crafting using “Packet creator” tools
6	Exploiting NetBIOS vulnerability
7	Password Revelation from browsers and social networking application
8	Creating and Analyzing spoofed emails
9	Analyzing the Trojans
10	Creating the Trojans
11	OS password cracking
12	Data recovery and password protecting techniques for Pendrive and CD

Ability Enhancement Courses (AEC)

Code: MULCHU2201

Spoken English & Communication Skills- I

1 Credit [LTP: 0-0-2]

Course Outcomes:

Students will be able to:

- Prepare and deliver a clear and fluent demonstrative, informative, and persuasive presentation and enlarge their vocabulary by keeping a vocabulary journal.
- Classify the factors that influence use of grammar and vocabulary in speech and writing.
- Recognize and Consciously Use English to Create and Maintain Productive work in professional and educational settings.
- Enhance their language proficiency in writing by identifying the errors and rectifying them.
- Generate a pile of ideas by examining issues in greater depth, looking at different dimensions of these issues.

A. OUTLINE OF THE COURSE

Skill Enhancement Courses (SEC)

Code: MULCSE2201

Skill Enhancement Generic Course -II

1 Credit [LTP: 0-0-2]

COURSE OUTCOMES:

Students will be able to:

CO.1: Enhance problem solving skills.

CO.2: Prepare for various public and private sector exams & placement drives

CO.3: Communicate effectively & appropriately in real life situation.

CO.4: Improve verbal ability skill among students.

CO.5: Enrich their knowledge and to develop their logical reasoning thinking ability.

LIST OF LABS

LIST OF LABS	
1	Types of Interviews, Interview Practice
2	Time & Work, Syllogisms
3	Critical Reasoning
4	Mensuration, Cubes & Dices
5	Para Jumble, Permutations & Combinations
6	Blood Relations & Direction Sense, Manners & Etiquette
7	Idiom & Phrases, Prefix-Suffix
8	Probability. Puzzles
9	Data Sufficiency, Logical Choices & Connectives
10	Date Interpretations, Deductions
11	Essay Writing, E-mail Writing
12	Personal Grooming

OBJECTIVE: To expose engineering students to technology development at workplaces and appraise them regarding shop-floor problems. To provide practical experience in solving open ended problems in real work setting so as to cause transfer of college based knowledge and skills to solve practical problems and thereby develop confidence in the students in the analysis, synthesis and evaluation of practical problems leading to creative thinking.

At the end of the second semester each student would undergo Industrial Training in an industry/ Professional organization / Research Laboratory with the prior approval of the Head of Department and Training & Placement Officer, and shall be required to submit a written typed report along with a certificate from the organization and present a PPT based on the training.

This period shall include orientation and preparation for the said Training incorporated in the curriculum after second semester.

The report of the Training shall be evaluated during III Semester by a Board of Examiners to be appointed by the Faculty Coordinator-Training Seminar who will award the grades.

Semester-III

Major (Core Courses) Theory

Code: MCACCA3101

Operating System

3 Credits [LTP: 3-0-0]

COURSE OUTCOME

Students will be able to:

- Describe the structure and organization of the file system.
- Demonstrate a process synchronization and scheduling.
- Determine different approaches to memory management.
- Use system calls for managing processes, memory and the file system.
- Define the data structures and algorithms used to implement an OS.

A. OUTLINE OF THE COURSE

Unit No.	Title of The Unit	Time required for the Unit (Hours)
1	Operating System Overview	07
2	Process Management	08
3	Process Deadlocks	08
4	Memory Management	07
5	File Management	07

B. DETAILED SYLLABUS

Unit	Unit Details
1	Operating System Overview
	<ul style="list-style-type: none"> • Introduction of Unit • Definition, Two views of operating system, Evolution of operating system, Types of OS. • System Call, Handling System Calls, System Programs, Operating System Structures, • The Shell, Open Source Operating Systems • Conclusion of Unit
2	Process Management

	<ul style="list-style-type: none"> • IntroductionofUnit • ProcessvsProgram,Multi-programming,ProcessModel,ProcessStates,ProcessControlBlock. • Threads,ThreadvsProcess,UserandKernelSpaceThreads. • InterProcessCommunication,RaceCondition,CriticalSection • ImplementingMutualExclusion:MutualExclusionwithBusyWaiting(Disabling • Interrupts,LockVariables,StrictAlteration,Peterson’sSolution,TestandSetLock), • SleepandWake-up,Semaphore,Monitors,MessagePassing, • ClassicalIPCproblems:ProducerConsumer,SleepingBarber,DiningPhilosopher Problem
	<ul style="list-style-type: none"> • Process Scheduling: Goals, Batch System Scheduling (First-Come First-Served, Shortest Job First,ShortestRemainingTimeNext),InteractiveSystemScheduling(Round-RobinScheduling,PriorityScheduling,Multiple Queues),OverviewofRealTimeSystemScheduling • ConclusionofUnit
3	ProcessDeadlocks
	<ul style="list-style-type: none"> • IntroductionofUnit • Introduction,DeadlockCharacterization,PreemptableandNon-preemptableResources, • Resource–AllocationGraph,ConditionsforDeadlock • HandlingDeadlocks:OstrichAlgorithm,Deadlock prevention,DeadlockAvoidance • DeadlockDetection(ForSingleandMultipleResourceInstances),RecoveryFrom • Deadlock(ThroughPreemptionandRollback) • ConclusionofUnit
4	MemoryManagement
	<ul style="list-style-type: none"> • IntroductionofUnit • Introduction,Monoprogrammingvs.Multi-programming,ModellingMultiprogramming,Multiprogrammingwithfixedand variablepartitions,Relocationand Protection. • Memorymanagement(Bitmaps&Linked-list),MemoryAllocationStrategies • Virtualmemory:Paging, PageTable,PageTableStructure,HandlingPageFaults,TLB’s • PageReplacementAlgorithms:FIFO,SecondChance,LRU,Optimal,LFU,Clock,WS-Clock,ConceptofLocalityofReference, Belady’sAnomaly • Segmentation:NeedofSegmentation,itsDrawbacks,SegmentationwithPaging(MULTICS) • ConclusionofUnit
5	FileManagement

- IntroductionofUnit
- FileOverview:FileNaming,FileStructure,FileTypes,FileAccess,File Attributes,FileOperations,SingleLevel,twoLeveland Hierarchical DirectorySystems,FileSystemLayout.
- Implementing Files: Contiguous allocation, Linked List Allocation, Linked List Allocation using Table inMemory,Inodes.
- DirectoryOperations,PathNames,DirectoryImplementation,SharedFiles
- FreeSpaceManagement:Bitmaps,LinkedList
- ConclusionofUnit

Practical

Code: MCACCA3201

Operating System Lab

1 Credit [LTP: 0-0-2]

COURSE OUTCOME

Students will be able to:

- Implement basic services and functionalities of the operating system using system calls.
- Use modern operating system calls and synchronization libraries in software/ hardware interfaces.
- Know the benefits of thread over process and implement synchronized programs using multi-threading concepts.
- Analyze and simulate CPU Scheduling Algorithms like FCFS, Round Robin, SJF, and Priority.
- Implement memory management schemes and page replacement schemes.

A. LIST OF EXPERIMENTS:

1	Write a C program to simulate the following non-preemptive CPU scheduling algorithms to find turnaround time and waiting time. a) FCFS b) SJF c) Round Robin d) Priority
2	Write a C program to simulate the following file allocation strategies. a) Sequential b) Indexed c) Linked
3	Write a C program to simulate multi-level queue scheduling algorithm considering the following scenario. All the processes in the system are divided into two categories – system processes and user processes. System processes are to be given higher priority than user processes. Use FCFS scheduling for the processes in each queue
4	Write a C program to simulate the MVT and MFT memory management techniques.
5	Write a C program to simulate the following contiguous memory allocation techniques a) Worst-fit b) Best-fit c) First-fit
6	Write a C program to simulate paging technique of memory management
7	Write a C program to simulate Bankers algorithm for the purpose of deadlock avoidance.
8	Write a C program to simulate disk scheduling algorithms a) FCFS b) SCAN c) C-SCAN
9	Write a C program to simulate page replacement algorithms a) FIFO b) LRU c) LFU
10	Write a C program to simulate page replacement algorithms
11	Write a C program to simulate producer-consumer problem using semaphores.
12	Write a C program to simulate the concept of Dining-Philosophers problem.

Vulnerability Assessment & Penetration Testing

3Credits [LTP: 3-0-0]

COURSE OUTCOME

Students should be able to:

- Illustrate fundamental concepts involved in cryptography and how they help in achieving the goals of information security
- Describe various algorithms and processes used in cryptography for authenticating users, securing information and communication
- Various encoding formats used in a web environment
- Define and describe the concepts of virtual machines and their operation
- HTTP Protocol including verbs, status codes and parameters

A. OUTLINE OF THE COURSE

Unit No.	Title of The Unit	Time required for the Unit (Hours)
1.	Introduction to Vulnerability assessment	07
2.	Information Gathering and Open source tools	08
3.	Vulnerability Assessment -I	08
4.	Vulnerability Assessment -II	07
5.	Penetration Testing	07

B. DETAILED SYLLABUS

Unit	Unit Details
1.	Introduction to Vulnerability assessment
	<ul style="list-style-type: none"> • Introduction to Unit • Overview of penetration testing • Difference between Vulnerability assessment & Penetration Testing • Testing Scoping / Ethics / Basics • Passive reconnaissance - ways to obtain data on a target without ever hitting the target. • Active reconnaissance and building the overall picture • Conclusion of the Unit
2.	Information Gathering and Open source tools

	<ul style="list-style-type: none"> • Introduction to Unit • Active reconnaissance. The art of active reconnaissance. Students will use nmap, nikto and other open-source tools to actively scan a target • Establishing a target list. Students will take gathered information from their reconnaissance and build a target list that is focused • Vulnerability assessment. • Open source / free tools to assess the weakness and vulnerabilities of the systems on the target list. • Tools - Openvas, Nessus • Conclusion of the Unit
3.	Vulnerability Assessment -I
	<ul style="list-style-type: none"> • Introduction of Unit • Utilize open source tools to tamper with HTTP Headers and parameters. • Building upon skills learned from the brute force lecture, attempt to brute force headers to learn about the system they are attacking. • Cross site scripting, Learn what cross site scripting is, and how XSS can be used to further the attack process. Students will learn the difference how to gain further access into systems with XSS. • File Inclusion: Students will learn what file inclusion is, and how to perform advanced attacks utilizing file inclusion, including uploading web shells, backdoors, etc. • -Session hijacking. Students will utilize open source tools to perform MITM attacks and session hijacking. Students will learn how session fixation and hijacking can occur and how it can be used to bypass authentication systems • Conclusion of Unit
4.	Vulnerability Assessment -II
	<ul style="list-style-type: none"> • Introduction of Unit • Exploitation of vulnerabilities: Students will learn to identify weak and outdated software, and target attacks specifically to that software to gain a foothold within a network Metasploit and other open source tools will be used to further the attack process. • Privilege escalation: Students will learn how to escalate privileges on systems with Metasploit and also will learn about other techniques to gain higher level accounts on systems. • Vulnerability analysis with Metasploit framework • Conclusion of Unit
5.	Penetration Testing
	<ul style="list-style-type: none"> • Introduction of Unit • Penetration testing concepts • Types of penetration testing • Tools and techniques used in penetration testing • Nmap and live scanning on ports and networks • Web application assessment with nikto & burp suite • Conclusion of Unit

C. RECOMMENDED STUDY MATERIAL

S. No	Text Books:	Author	Edition	Publication
1.	The Basics of Hacking and Penetration Testing: Ethical Hacking and Penetration Testing Made Easy	Patrick Engebretson	First Edition	2011
2.	Microsoft Log Parser Toolkit: A complete toolkit for Microsoft's undocumented log analysis tool	Gabriele Giuseppini	2nd Edition	2005
Reference Book				
1.	Cryptography and Information Security, V. K. Pachghare, Prentice Hall India, 2nd rev ed; 2015			
2.	Cryptography and Network Security, Atul Kahate, McGraw Hill India, 3rd ed; July 2017			
Online Resources				
1.	https://www.edx.org/learn/cryptography			
2.	https://sopa.tulane.edu/blog/how-to-learn-cryptography			
3.	https://www.youtube.com/watch?v=dz7Ntp7KQGA			

COURSE OUTCOME

Students will be able to:

- Describe the main concepts, key technologies, strengths, and limitations of cloud
- Demonstrate the architecture and infrastructure of cloud computing and various service models.
- Define the concept and application of virtualization
- Analyze the concept of service management in cloud computing
- Examine security and privacy issues in cloud computing

A. OUTLINE OF THE COURSE

Unit No.	Title of the unit	Time required for the Unit (Hours)
1.	Introduction to Cloud Technologies	08
2.	Cloud Computing Architecture and Service Models	08
3.	Virtualization	06
4.	Service Management in Cloud Computing	06
5.	Cloud Security	06

B. DETAILED SYLLABUS

Unit	Unit Details
1.	Introduction to Cloud Technologies
	Overview of computing paradigm: Recent trends in Computing - Grid Computing, Cluster Computing, Distributed Computing, Utility Computing, Cloud Computing. History of Cloud Computing, Evolution of cloud computing - Business driver for adopting cloud computing, Cloud service providers. Properties, Characteristics & Disadvantages - Pros and Cons of Cloud Computing, Benefits of Cloud Computing, Cloud computing vs. Cluster computing vs. Grid computing.
2.	Cloud Computing Architecture
	Cloud Computing Architecture: Cloud computing stack - Comparison with traditional computing architecture (client/server), Services provided at various levels, How Cloud Computing Works, Role of Networks in Cloud computing, protocols used, Role of Web services. Service Models (XaaS) - Infrastructure as a Service (IaaS), Platform as a Service (PaaS), Software as a Service (SaaS). Deployment Models, Public cloud, Private cloud, Hybrid cloud, Community cloud
3.	Virtualization
	Introduction to virtualization, Different approaches to virtualization, Hypervisors, Machine Image, Virtual Machine (VM). Resource Virtualization - Server, Storage, Network. Virtual Machine (resource) provisioning and manageability, storage as a service, Data storage in cloud computing (storage as a service). Renting, EC2 Compute Unit, Platform and Storage, pricing, customers. Service Oriented Architecture (SOA). Cloud Platform and Management – computation Web services, Web 2.0, Web OS
4.	Service Management in Cloud Computing
	Service Management in Cloud Computing: Service Level Agreements(SLAs), Billing & Accounting,

	Comparing Scaling Hardware: Traditional vs. Cloud, Economics of scaling: Benefitting enormously, Managing Data - Looking at Data, Scalability & Cloud Services, Database & Data Stores in Cloud, Large Scale Data Processing
5.	Cloud Security
	Cloud Security: Infrastructure Security - Network level security, Host level security, Application level security. Data security and Storage - Data privacy and security Issues, Jurisdictional issues raised by Data location: Identity & Access Management, Access Control, Trust, Reputation, Risk, Authentication in cloud computing, Client access in cloud, Cloud contracting Model, Commercial and business considerations

C. RECOMMENDED STUDY MATERIAL

S. No	Text Books:	Author	Edition	Publication
1.	Cloud Computing Bible	Barrie Sosinsky	Latest	John Wiley & Sons
2.	Cloud Computing: A Practical Approach	Velte Anthony T., Velte Toby J. and Elsenpeter Robert	Latest	McGraw Hill, Indian edition
3.	Cloud Computing: Principles and Paradigms	Rajkumar Buyya	Latest	John Wiley & Sons,
S. No	Text Books:	Author	Edition	Publication
1.	Cloud Computing Bible	Barrie Sosinsky	Latest	John Wiley & Sons
2.	Cloud Computing: A Practical Approach	Velte Anthony T., Velte Toby J. and Elsenpeter Robert	Latest	McGraw Hill, Indian edition
Reference Book				
1	Cloud Computing: Principles and Paradigms, Rajkumar Buyya, John Wiley & Sons			
Online Resources				
1	https://onlinecourses.nptel.ac.in/noc22_cs20/preview			
2	https://www.w3schools.in/cloud-computing			

COURSE OUTCOME

Students will be able to:

- Interpret the fundamental concepts, involved in cryptography for information security purpose
- Memorize various algorithms and processes used in cryptography for authenticating users, securing information and communication
- Evaluate the previous algorithms and redesign it in order to maintain the security of the digital data
- Create the modern techniques and algorithms to provide the better security of computer networks
- Apply the knowledge to provide in detail concepts and tools to enhance the security of in use algorithms

A. OUTLINE OF THE COURSE

Unit No.	Title of The Unit	Time required for the Unit (Hours)
1.	Introduction to Cryptography	07
2.	Cryptographic algorithms	08
3.	Key Exchange and Management	08
4.	Application of Cryptography	07
5.	Network Security	07

B. DETAILED SYLLABUS

Unit	Unit Details
1.	Introduction to Cryptography
	<ul style="list-style-type: none"> • Introduction to Unit • The goals of Security- Confidentiality, Integrity & Availability (CIA) Triad • Cryptographic concepts, methodologies & practices • Symmetric & Asymmetric cryptography, public & private keys • Cryptographic algorithms and uses • Construction & use of Digital signatures • Conclusion of the Unit
2.	Cryptographic algorithms
	<ul style="list-style-type: none"> • Introduction to Unit • Chinese Remainder Theorem • Arithmetic modulo primes and finite cyclic groups • DES, RSA, SHA • MD5, HMAC, DSA • Conclusion of the Unit
3.	Key Exchange and Management
	<ul style="list-style-type: none"> • Introduction of Unit • Key Exchange mechanisms and its security- Diffie-Hellman • MITM • Public Key Infrastructure • The basic functions involved in key management including creation, distribution, verification, revocation

	and destruction, storage, recovery. • Conclusion of Unit
4.	Application of Cryptography
	<ul style="list-style-type: none"> • Introduction of Unit • Major key distribution methods and algorithms including Kerberos, ISAKMP etc., Vulnerabilities to cryptographic functions. • Use and functions of Certifying Authorities (CAs), Public Key Infrastructure (PKI) and System architecture requirements for implementing cryptographic functions. • Web Services security, Cloud Security, VPNs • Conclusion of Unit
5.	Network Security
	<ul style="list-style-type: none"> • Introduction of Unit • Email Security, PGP, POP- versions • Firewall and its types • Modern firewalls • Signature vs. Anomaly based firewalls • Statefull vs. Stateless Firewall • Conclusion of Unit

C. RECOMMENDED STUDY MATERIAL

S. No	Text Books:	Author	Edition	Publication
1.	Cryptography and Network Security	William Stallings	First Edition	2010
2.	Everyday Cryptography: Fundamental Principles and Applications	Keith Martin	2nd Edition	2017
Reference Book				
1.	Cryptography and Information Security, V. K. Pachghare, Prentice Hall India, 2nd rev ed; 2015			
2.	Cryptography and Network Security, Atul Kahate, McGraw Hill India, 3rd ed; July 2017			
Online Resources

Minor Stream Courses Courses Lab

Code: MCYCCA3201

Vulnerability Assessment & Penetration Testing Lab

1Credit [LTP: 0-0-2]

Course Outcome:

Students will be able to:

- Describe various algorithms and processes used in cryptography for authenticating users, securing information and communication
- Analyze and design hash and MAC algorithms, and digital signatures
- Identify Intruders and Intruder Detection mechanisms, types of Malicious software
- Acknowledge and analyze data encryption standard
- Analyze and design of software and its usage

A. LIST of PROGRAMS

1	Perform the Information gathering using various tools and techniques
2	Perform DNS and other server enumerations
3	Use the various scanners to perform Network and port scanning
4	Manual and automated vulnerability scanning using various tools
5	Use the wireshark for packet capturing
6	Privilege escalation techniques on Windows and Linux
7	Perform the password and hash attacks
8	Web application hacking (SQL injection, Remote code Execution, local file inclusion, file upload vulnerabilities etc.)
9	Use the basic features of Burp Suite.-I
10	Use the basic features of Burp Suite.-II
11	Perform operations using Metasploit framework.-I
12	Perform operations using Metasploit framework.-II

B. RECOMMENDED STUDY MATERIAL:

S. No	Text Books:	Author	Edition	Publication
1.	Hacking: The Art of Exploitation	Jon Erickson	First Edition	2010
2.	Penetration Testing: A Hands-On Introduction to Hacking	Georgia Weidman	First Edition	2017

Reference Book	
1.	Cryptography and Information Security, V. K. Pachghare, Prentice Hall India, 2nd rev ed; 2015
2.	Cryptography and Network Security, Atul Kahate, McGraw Hill India, 3rd ed; July 2017
Online Resources	
1.	https://www.yeahhub.com/best-16-penetration-testing-books-2018-update/
2.	https://www.virtualhackinglabs.com/labs/penetration-testing-lab/

Course Outcome:-

Students will be able to:

- Demonstrate Virtualization and use in real life scenario.
- Apply Server and Storage Virtualization
- Install and configure Vmware
- Apply the concept of vSpher
- Install VSAN

A. LIST OF EXPERIMENTS:

1	Desktop Virtualization – Network Virtualization
2	Server and Machine Virtualization
3	Storage Virtualization - System-level or Operating Virtualization
4	Sever Virtualization - Physical and Logical Partitioning - Types of Server Virtualization
5	Installing and configuring ESXi 5.5/6.0 Server [On Premise]
6	Introduction to Management with vCenter Server
7	Introduction to vSphere Networking And Security
8	Introduction to vSphere Storage
9	VSAN 6.6 Setup and Enablement
10	vSAN Scale Out with Configuration Assist
11	vSAN All Flash Capabilities
12	VSANiSCSI Target

B. RECOMMENDED STUDY MATERIAL

S. No	Text Books:	Author	Edition	Publication
1.	Virtualization 101: Introduction to vSphere	A. s. solanki		TMH
Reference Book				
1.	Cloud Computing: Principles and Paradigms, Rajkumar Buyya, John Wiley & Sons			
Online Resources				
1.	https://sist.sathyabama.ac.in/sist_coursematerial/uploads/SCSA7022.pdf

Ability Enhancement Courses (AEC)

Code: MULCHU3201

Spoken English & Communication Skills II 1Credit [LTP: 0-0-2]

COURSE OUTCOMES

Students would be able to:

- Demonstrate depth of understanding, observing complexity, improve insight and develop independent thought and persuasiveness.
- **Determine** the main ideas of the text by using key details and compare & contrast the most important points with the help of their perspective.
- Practice the qualities of writing style by applying the concepts of sentence conciseness, accuracy, readability, coherence and by avoiding wordiness or ambiguity.
- Distinguish words and phrases as per their intonation patterns and interpret the audios based on different situations
- Demonstrate the understanding of impactful conversational skills, presentation skills & telephonic conversation by considering the need of the audience

Unit No.	Title of the Unit	Time required for the Unit (Hours)
1	Advanced Listening & Speaking Skills	12
2	Advanced Reading & Writing Skills	6
3	Art of Negotiation Skills	2
4	Email Etiquettes	2
5	Group Discussion	2

LIST OF LABS	
1	Listening Skills II: Analysis of videos/audios by famous personalities
2	Speaking Skills II: Extempore, Debate etc.
3	Public Speaking: Key Concepts, Overcoming Stage Fear
4	Story-Telling Skills: Techniques of Story Telling, Prompts for story creation
5	Situational Conversational Skills
6	PowerPoint Presentation Skills-II
7	Reading Skills II: Technical Writings, Research Papers& Articles
8	Writing Skills II: Blog Writing & Review Writing
9	Picture Perception & Discussion
10	Art of Negotiation: Identify the qualities of successful and unsuccessful negotiators. Identify different negotiation situations to practice during class.
11	Email Etiquettes
12	Group Discussion: Dos & Don'ts, Informal GD

Code: MULCSE3201

Skill Enhancement Generic Course –III

1Credit [LTP: 0-0-2]

COURSEOUTCOMES: On completion of the course a student will be able to:

- Understand basic problems based on arithmetic and soft skills area which are asked in aptitude test taken by companies
- Effectively solve these problems by applying the knowledge earned.
- Actively participate in group discussion / meetings / interviews and prepare & deliver presentations.
- Become more effective individual through goal/target setting, self-motivation and practicing creative thinking.
- Function effectively in multi-disciplinary and heterogeneous teams through the knowledge of team work, Inter-personal relationships, conflict management and leadership quality

LIST OF ACTIVITIES

LIST OF ACTIVITIES	
1	Objective Building, Parts of speech, Nouns, Numbers & Genders, Importance of soft skills
2	Logarithms, Number Theory
3	Tenses
4	Number system- Fractions & Decimals
5	Stress Management Techniques, Critical Thinking
6	Modal Verbs & Conditional Tense, Working under pressure
7	Boosting brain power for fast learning & unlearning
8	Pronouns, Adverbs & Adjectives
9	Emotional Intelligence, 5 levels of listening
10	Remainder Theoram
11	Points, lines & angles
12	Article Writing

SEMESTER-IV

COURSEOUTCOMES: On completion of the course a student will be able to:

- Understand basic problems based on arithmetic and soft skills area which are asked in aptitude test taken by companies
- Effectively solve these problems by applying the knowledge earned.
- Actively participate in group discussion / meetings / interviews and prepare & deliver presentations.
- Become more effective individual through goal/target setting, self-motivation and practicing creative thinking.
- Function effectively in multi-disciplinary and heterogeneous teams through the knowledge of team work, Inter-personal relationships, conflict management and leadership quality

LIST OF ACTIVITIES

LIST OF ACTIVITIES	
1	Averages, Mean, Median and Mode
2	Cognitive learning theory, Body Language basics
3	Heights & Distances
4	Sitting Arrangements
5	Fill Ups(Grammar based)
6	Error Detection, Confusing words
7	Alphanumeric Series
8	Verbal Analogy, One word substitution
9	Dices
10	Sentence Correction, Subject-Verb agreement
11	Statement & Assumptions, Setting SMART goals,
12	Persuasion Skills, Interview Preparation
